An air fryer is a kitchen appliance that extracts heat and cooks food by circulating hot air. With an air fryer, you can cook without using any oil, making it the perfect option for someone looking to reduce their fat intake or cut back on calories. An air fryer is a mini convection oven, in essence. Its promise: to match the taste and texture of your favorite deep-fried foods minus all the fat and all those extra calories. While many fried dish recipes require up to 51 tablespoon of oil, foods fried in air fryers only need about 1 of it. This means that air fryers use 50 TIMES less oil than classic deep fryers, resulting in a much smaller caloric intake at the end of the day/week. You are able to enjoy super crispy french fries or chicken nuggets without the guilt! Even vegetables, like air-fried Brussels sprouts or Broccoli, can get the crispy, high-heat treatment with delicious results. Get your copy today and enjoy healthy and tasty meals!
