Airports and airlines are a high speed, high reliability operation where even the smallest issue can cause a massive problem. Every piece of equipment in your operation needs to work on time, every time, so you can continue to perform. Our PosiCharge outdoor-rated chargers have the proven reliability to be trusted in some of the world's most extreme environments, from airports in Alaska to U.S. military bases in Afghanistan, to do just that.

ACRP Report 78: "The original
problem statement and objectives
for ACRP 02-16 as developed by
the project panel are restated as
follows: 'Increased levels of
demand at airports in the United
States may result in a growth in
airport GSE activity and an
associated increase in airport
surface emissions. Local air
quality and global climate change
concerns, regulatory pressures,

Download Ebook Airport Ground Support Equipment

and the desire to be environmentally responsible have resulted in a growing number of airport programs around the United States looking to assess and reduce airport emissions. Although much is known about aircraft fleets, operations, and emissions, comparatively little is known about GSE. The available GSE data are outdated, unreliable, and limited. Accurate GSE data are needed by the FAA and airport sponsors to plan adequately and to balance the growing demands of air travel with air quality concerns. Proactive strategies that reduce surface emissions may help airports address air quality concerns. As such, research is needed to obtain additional

Download Ebook Airport Ground Support Equipment

information on GSE equipment and to identify programs and best practices that could reduce GSE emissions for GSE owners, operators, and airports.' In response to this problem statement, the primary objectives of this research were to (1) develop a tutorial that describes GSE operations and identifies potential strategies to reduce emissions from powered GSE for use by GSE owners and operators and (2) conduct a representative inventory of powered GSE at airports to help the industry assess the contribution of GSE to air quality impacts at airports. ."

Reducing Airline's Carbon Footprint is the answer to the airline executives' problems, when it comes to looking for ways to reduce aircraft operations cost. Reducing Airline's Carbon Footprint introduces the Electric Taxi System, ETS. When commercial aircrafts are equipped with this system, the cost of operation will be reduced due to taxi without the main

Download Ebook Airport Ground Support Equipment

engines running. Also, the aircraft engines will not be ingesting foreign object debris (FOD) causing damage to the internal moving parts, and the airport area air pollution will see a decrease. This is the grey cloud that hovers over most busy airports. Reducing Airline's Carbon Footprint breaks through this cloud by providing ETS as the solution. Throughout its pages, Dr. Thomas F Johnson addresses these benefits of ETS:

Improvement of Airport Area Air Quality
Reduce aircraft carbon footprint
Potential Costs of ETS Installation
Fuel Consumption Evaluation before and after ETS installation
Ground Taxi Time Evaluation
Improved Airport Terminal Accessibility
Landing
