In classical rhetoric and logic, begging the question or assuming the conclusion is an informal fallacy that occurs when an argument's premises assume the truth of the conclusion, instead of supporting it.. For example, the statement "green is the best color because it is the greenest of all colors" claims that the color green is the best because it is the greenest - which it presupposes is ...

Sarah had worked with Hugo van Elven for a long time, and she was astounded when he suddenly proposed to her. Sarah Dunn and Hugo van Elven were married for the wrong reasons. Even if it was just a marriage of convenience. They were both recovering from unhappy love affairs. Sarah was looking for comfort and companionship; for Hugo marriage was a social necessity. Serious complications set in when fate swept unexpectedly through their lives! Originally published in 1971.

A frank and entertaining memoir, from the daughter of Edward Said, about growing up second-generation Arab American and struggling with that identity. The daughter of a prominent Palestinian father and a sophisticated Lebanese mother, Najla Said grew up in New York City, confused and conflicted about her cultural background and identity. Said knew that her parents identified deeply with their homelands, but growing up in a Manhattan world that was defined largely by class and conformity, she felt unsure about who she was supposed to be, and was often in denial of the differences she sensed between her family and those around her. The fact that her father was the famous intellectual and outspoken Palestinian advocate Edward Said only made things more complicated. She may have been born a Palestinian Lebanese American, but in Said's mind she grew up first as a WASP, having been baptized Episcopalian in Boston and attending the wealthy Upper East Side girls' school Chapin, then as a teenage Jew, essentially denying her true roots, even to herself--until, ultimately, the psychological toll of all this self-hatred began to threaten her health. As she grew older, making increased visits to Palestine and Beirut, Said's worldview shifted. The attacks on the World Trade Center, and some of the ways in which Americans responded, finally made it impossible for Said to continue to pick and choose her identity, forcing her to see herself and her passions more clearly. Today, she has become an important voice for second-generation Arab Americans nationwide.

Follow two abolitionists who fought one of the most shockingly persistent evils of the world: human trafficking and sexual exploitation of slaves. Told in alternating chapters from perspectives spanning more than a century apart, read the riveting 19th century first-hand account of Harriet Jacobs and the modern-day eyewitness account of Timothy Ballard. Harriet Jacobs was an African-American, born into slavery in North Carolina in 1813. She thwarted the sexual advances of her master for years until she escaped and hid in the attic crawl space of her grandmother's house for seven years before escaping north to freedom. She published an autobiography of her life, *Incidents in the Life of a Slave Girl*, which was one of the first open discussions about sexual abuse endured by slave women. She was an active abolitionist, associated with Frederick Douglass, and, during the Civil War, used her celebrity to raise money for black refugees. After the war, she worked to improve the conditions of newly-freed slaves. As a former Special Agent for the Department of Homeland Security who has seen the horrors and carnage of war, Timothy Ballard founded a modern-day "underground railroad" which has rescued hundreds of children from being fully enslaved, abused, or trafficked in third-world countries. His story includes the rescue and his eventual adoption of two young siblings--Mia and Marky, who were born in Haiti. Section 2 features the lives of five abolitionists, a mix of heroes from past to present, who call us to action and teach us life lessons based on their own experiences: Harriet Tubman--The "Conductor"; Abraham Lincoln--the "Great Emancipator"; Little Mia--the sister who

saved her little brother; Guesno Mardy--the Haitian father who lost his son to slave traders; and Harriet Jacobs--a teacher for us all.

Digital Systems: Principles and Design (For Anna University) is designed as an ideal textbook for students of electrical engineering. The book's coverage also meets the requirements of the Digital Electronics paper of the Electronics and Communication Engineering course, and of the Digital Principles and System Design paper of the Computer Science Engineering course. Spread across 18 chapters, the book covers digital fundamentals through worked-out examples and facilitates a firm understanding of the subject.

This book introduces the basic mathematical tools used to describe noise and its propagation through linear systems and provides a basic description of the improvement of signal-to-noise ratio by signal averaging and linear filtering. The text also demonstrates how op amps are the keystone of modern analog signal conditioning systems design, and il

The second edition of Electromagnetism: Theory and Applications has been updated to cover some additional aspects of theory and nearly all modern applications. The semi-historical approach is unchanged, but further historical comments have been introduced at various places in the book to give a better insight into the development of the subject as well as to make the study more interesting and palatable to the students. What is New to This Edition Vector transformations in different coordinate systems have been included in the chapter on Vector Analysis. The treatment forms the basis of vector potentials for three-dimensional problems. Chapter 13 on Vector Potentials has been significantly expanded for a clear understanding of the properties of vector potentials, in order to also solve three-dimensional EM problems numerically. A section dealing with the derivation and interpretation of Hertz Vector has been included in Chapter 13. A practical problem on induction heating of flat metal plates has been added to the chapter on Magnetic Diffusion. The topics of wave guidance and radiation have been expanded with emphasis on practical aspects. Sections on analysis of cylindrical dielectric waveguide (e.g. of optical fibres) have been added to Chapters 18 and 22. New sections on basis and explanations of modal transmissions have been added. Characteristics and practical details of basic antenna structures and arrays have been treated in greater detail. Provides comprehensive treatment of FEM (Finite Element Method), covering both its variational basis and procedural details, to enable the readers to use this method without going into the heavy mathematics underlying the method. Describes FDM (Finite Difference Method) in more detail with its convergence requirement. Introduces modern numerical methods like FDTD (Finite Difference Time Domain) and method of moments (MOM). A new chapter on Modern Topics and Applications covers both high frequency and low frequency applications. Appendices contain in-depth analysis of self-inductance and non-conservative fields (Appendix 6),

proof regarding the boundary conditions (Appendix 8), theory of bicylindrical coordinate system to provide the physical basis of the circuit approach to the cylindrical transmission line systems (Appendix 10), and properties of useful functions like Bessel and Legendre functions (Appendix 9). The book is designed to serve as a core text for students of electrical engineering. Besides, it will be useful to postgraduate physics students as well as research engineers and design and development engineers in industries.

Modern forms of budo, or martial ways practiced primarily for spiritual development, developed from established combat systems in response to social, political, historical and philosophical influences that occurred during the Edo Period (1615-1868). In classical budo, legendary martial artist Donn Draeger illuminates the history and evolution of these modern arts, including kendo, judo, kempo, kyudo, iaido, and jujutsu and puts them into historical perspective. This book includes fascinating artwork from classical sources and archival photos of budo arts masters in action.
