Economic Theory, Econometrics, and Mathematical Economics: New Quantitative Techniques for Economic Analysis provides a critical appraisal of the results, the limits, and the developments of well-established quantitative techniques. This book presents a detailed analysis of the quantitative techniques for economic analysis. Organized into four parts encompassing 16 chapters, this book begins with an overview of the general questions concerning models and model making. This text then provides the main results and various interesting economic applications of some quantitative techniques that have not been widely used in the economic field. Other chapters consider the principle of optimality in dynamic programming wherein the infinite sequence of consumption-saving decisions can be reduced to one decision. This book discusses as well the methods for online control and management of large-scale systems. The final chapter deals with special problems. This book is a valuable resource for economists, social scientists, epistemologists, economic historians, and research workers.

Historically, nutrient deficiencies have been of greater concern than dietary excess. However, along with the realization that deaths due to certain diseases are more prevalent in affluent countries came the conclusion that nutritional excess is of equal or in greater concern in many nations. Because immunologic reactions may play a role development of both cancer and atherosclerosis, better understanding of these interre lated phenomena may lead to innovative ideas for control of these diseases. There has been considerable interest in the role various nutrients may play in regulating immunologic responses. This has been especially true as a possible mecha nism by which fat modulates growth of tumors in animals. Likewise, deficiency or excess of a number of other individual nutrients have been linked to altered immune responses. This volume of Human Nutrition-A Comprehensive Treatise details the effects of a number of nutrients on immunity. The first chapter covers questionable and fraudu lent claims linking nutrition and immunity. The next chapter examines several aspects of food allergy. Ensuang chapters focus on specific nutrients such as fat, cholesterol, arginine, vitamins C, A, and E, carotenoids, flavonoids, zinc, iron, copper, and sele nium. There are two chapters on total energy intake affecting immune response, one examining protein-energy malnutrition and the other describing the effects of food restriction in otherwise healthy animals.

Papers presented at a seminar organized by the Dept. of Sanskrit, University of Kerala, during January 1977.

This book provides a complete and comprehensive coverage of the managerial economics syllabus of Gautam Buddh Technical University. It includes both, the basic microeconomics theories and some important aspects of macroeconomics including inflation, growth and business cycles. The subject matter is presented in a precise and lucid manner. Economic laws and theories have been explained and illustrated by applying graphical and algebraic tools of analysis and also illustrated with appropriate real life examples. Review questions have been provided at the end of each chapter for students to test their own understanding of managerial economics.

Curriculum scholars and teachers working for social justice and equity have been caught up in acrimonious and polarizing political debates over content, ideology, and disciplinary knowledge. At the forefront in cutting through these debates and addressing the practical questions involved, this book is distinctive in looking to the technical form of the curriculum rather than its content for solutions. The editors and contributors, all leading international scholars, advance a unified, principled approach to the design of curriculum and syllabus documents that aims for high quality/high equity educational outcomes and enhances teacher professionalism with appropriate system prescription. Stressing local curriculum development capacity and teacher professional responses to specific community and student contexts, this useful, practical primer introduces and unpacks definitions of curriculum, syllabus, the school subject, and informed professionalism; presents key principles of design; discusses a range of approaches; and offers clear, realistic guidelines for the tasks of writing curriculum documents and designing official syllabi and professional development programs at system and school levels. Providing a foundational structure for syllabus design work, Curriculum, Syllabus Design, and Equity is relevant for teachers, teacher educators, and curriculum policy workers everywhere who are engaged in the real work of curriculum writing and implementation.

For high school biology students and college zoology students, as well as for all students of nature, this coloring book teaches the structure and function of the major animal groups, from simple to complex. Brief, informative texts accompany each drawing.
