Using an experimental perspective, this student-friendly textbook teaches chemistry as a process not a product, describing research being done in the 90s that relates to material in the book. Introduces chemistry in terms of major themes designed to help students build connections between the next series of subjects under consideration and previous chapters. Explicit attention is paid to the development of problem solving skills.

An exploration of the science behind the powers of popular comic superheroes and villains illustrates the physics principles underlying the supernatural abilities of such characters as Superman, Magneto, and Spider-Man.

Presents React questions and activities that can be used as teaching tools in lectures or recitation, requiring the student to complete the activities in the guide. The approach stresses active learning, thereby underscoring one of the traditional strengths of the text—the book's conceptual approach to problem solving. For the instructor, PowerPoint slides are available on the HM ClassPrep CD and on the Online Teaching Center containing the questions from the Active Learning Guide as well as relevant figures from the text and animations. Answers to the React questions are in the Instructor's Resource Guide.
