This book provides a comprehensive introduction to modern auction theory and its important new applications. It is written by a leading economic theorist whose suggestions guided the creation of the new spectrum auction designs. Aimed at graduate students and professionals in economics, the book gives the most up-to-date treatments of both traditional theories of 'optimal auctions' and newer theories of multi-unit auctions and package auctions, and shows by example how these theories are used. The analysis explores the limitations of prominent older designs, such as the Vickrey auction design, and evaluates the practical responses to those limitations. It explores the tension between the traditional theory of auctions with a fixed set of bidders, in which the seller seeks to squeeze as much revenue as possible from the fixed set, and the theory of auctions with endogenous entry, in which bidder profits must be respected to encourage participation.

The Knowledge Quiz series is a deviously simple and effective way for students to revise for GCSE subjects. These easy-to-use books feature tear-out quizzes to help students memorise the body of knowledge that form the basis of success.

This book has been specifically written for the new two-tier Edexcel linear GCSE specification for first examination in 2008 by the highly successful Framework Maths author team. The book is targeted at the B to A* grade range in the Higher tier GCSE, and it comprises units organised clearly into inspiring full-colour spreads. Each unit offers: * Prior learning assessed at the start so students are fully prepared for the topic * Learning objectives identified so it is clear what students need to know * Clear explanations with examples showing the key techniques * Plenty of practice with clearly differentiated questions pitched at an appropriate level * Summaries and past Edexcel questions to help students gain responsibility for their learning It forms part of a series of four student books at GCSE, in which the other three books cater for grade ranges G to E, E to C and D to B.

Our brand-new resources are written specifically to tackle the demands of the GCSE (9-1) Maths.

Involved: Writing for College, Writing for Your Self helps students to understand their college experience as a way of advancing their own personal concerns and to draw substance from their reading and writing assignments. By enabling students to understand what it is they are being asked to write{u2014}from basic to complex communications{u2014}and how they can go about fulfilling those tasks meaningfully and successfully, this book helps students to develop themselves in all the ways the university offers. This edition of the book has been adapted from the print edition, published in 1997 by Houghton Mifflin. Copyrighted materials{u2014}primarily images and examples within the text{u2014}have been removed from this edition. --

Complex analysis can be a difficult subject and many introductory texts are just too ambitious for today's students. This book takes a lower starting point than is traditional and concentrates on explaining the key ideas through worked examples and informal explanations, rather than through "dry" theory.

Mathematical demography is the centerpiece of quantitative social science. The founding works of this field from Roman times to the late Twentieth Century are collected here, in a new edition of a classic work by David R. Smith and Nathan Keyfitz. Commentaries by Smith and Keyfitz have been brought up to date and extended by Kenneth Wachter and Hervé Le Bras, giving a synoptic picture of the leading achievements in formal population studies. Like the original collection, this new edition constitutes an indispensable source for students and scientists alike, and illustrates the deep roots and continuing vitality of mathematical demography.
