The major aim of Cyberspace and the State is to provide conceptual orientation on the new strategic environment of the Information Age. It seeks to restore the equilibrium of policy-makers which has been disturbed by recent cyber scares, as well as to bring clarity to academic

debate on the subject particularly in the fields of politics and international relations, war and strategic studies. Its main chapters explore the impact of cyberspace upon the most central aspects of statehood and the state system?power, sovereignty, war, and dominion. It is concerned equally with

of Security. It aims to explain the history of political power in a unique way by approaching the concept of power through the lens of neurophilosophy – the application of neuroscientific principles to practical questions of governance, ethics, political and moral philosophy. In this book, Professor

central idea of the book is the highly addictive universal nature of power at the neurochemical level, the craving for it, and the intense resistance to giving it up in all walks of life and circumstances. This can be applied directly to thinking about governance, political change, public policy, national

offers plausible solutions on how to create an environment where there is confidence in the ability to assure national security, conduct military operations, and ensure a vibrant and stable global economy.

China's emergence as a major global

power is reshaping the cyber domain.

The country has the world's largest internet-user community, a growing economic footprint and increasingly capable military and intelligence services. Harnessing these assets, it is pursuing a patient, assertive foreign policy that seeks to determine how

information and communications technologies are governed and deployed. This policy is likely to have significant normative impact, with potentially adverse implications for a global order that has been shaped by Western liberal democracies. And, even as China goes out into the world,

there are signs that new technologies are becoming powerful tools for domestic social control and the suppression of dissent abroad.

Western policymakers are struggling to meet this challenge. While there is much potential for good in a self-confident China that is willing to invest
