A Thoroughly Biblical and Compelling Case for Healing from the Best-Selling Author of A More Excellent Way Over thirty years ago, Dr. Henry Wright experienced major success in praying for people to be healed from disease. But suddenly the healing stopped. He began asking God why people weren't being healed. Through a pursuit of God's Word and truth, he began a lifelong journey of learning the spiritual roots of disease and blockages to healing. In this journey, he discovered that about 80 percent of all disease has a spiritual root issue and is a direct result of a breakdown in our relationship with God, ourselves, or others. Dr. Wright began teaching the biblical principles and truths he discovered and found great success in people's healing and recovery. He has helped tens of thousands to experience wholeness in their lives. Every human being is a spirit with a soul living in a body. Therefore, this is not just about our physical health, although it greatly impacts our bodily well-being. It is about our identity in God and the freedom He desires to give us, extending from our spirits to our souls and bodies. In this book, Dr. Wright presents a thoroughly biblical and compelling case for healing. If you think you've read all you need to know about healing, it's time to take another look! The author clearly shows that disease is not a random occurrence and that science and medicine have their limitations in dealing with the spiritual roots of illnesses that inflict millions. We need healing for spirit, soul, and body. If you have recently been diagnosed with an illness or have been struggling with your health for years, there is hope and healing ahead. "I am so thankful about these physical healings. However, I'm even more thankful for the inner peace and faith that I have been experiencing. [They are] beyond description." —Sue from Maryland (healed of back pain, rheumatism, and high cholesterol) "His perfect will is that we don't get sick. But once we're sick, the provision has been made for healing. We just need to line up with the Word of God and be transparent, and everything takes care of the rest." —Claudio (he and his wife healed of infertility; their newborn son healed of serious health issues)

The book that inspired the major new motion picture Mandela: Long Walk to Freedom. Nelson Mandela is one of the great moral and political leaders of our time: an international hero whose lifelong dedication to the fight against racial oppression in South Africa won him the Nobel Peace Prize and the presidency of his country. Since his triumphant release in 1990 from more than a quarter-century of imprisonment, Mandela has been at the center of the most compelling and inspiring political drama in the world. As president of the African National Congress and head of South Africa's antiapartheid movement, he was instrumental in moving the nation toward multiracial government and majority rule. He is revered everywhere as a vital force in the fight for human rights and racial equality. LONG WALK TO FREEDOM is his moving and exhilarating autobiography, destined to take its place among the finest memoirs of history's greatest figures. Here for the first time, Nelson Rolihlala Mandela tells the extraordinary story of his life—an epic of struggle, setback, renewed hope, and ultimate triumph.

Drawing on research that suggests that most mental and physical illnesses are tied to toxic thinking, a best-selling reference identifies 13 practices for detoxifying a life by changing negative thought habits and embracing a lifestyle of physical, mental and emotional wholeness.

Biofilms are ubiquitous and their presence in industry can lead to production losses. However, nowhere do biofilms impact human health and welfare as much as those that are found contaminating the healthcare environment, surgical instruments, equipment, and medical implantable devices. Approximately 70% of healthcare-associated infections are due to biofilm formation, resulting in increased patient morbidity and mortality. Biofilms formed on medical implants are recalcitrant to antibiotic treatment, which leaves implant removal as the principal treatment option. In this book, we investigate the role of biofilms in breast and dental implant disease and cancer. We include in vitro models for investigating treatment of chronic wounds and disinfectant action against Candida sp. Also included are papers on the most recent strategies for treating biofilm infection ranging from antibiotics incorporated into bone void fillers to antimicrobial peptides and quorum sensing.

Our responses to our thermal environment have a considerable effect on our performance and behavior, not least in the realm of work. There has been considerable scientific investigation of these responses and formal methods have been developed for environmental evaluation and design. In recent years these have been developed to the extent that detailed national and international standards of practice have now become feasible. This new edition of Ken Parson's definitive text brings us back up to date. He covers hot, moderate and cold environments, and defines these in terms of six basic parameters: air temperature, radiate temperature, humidity, air velocity, clothing worn, and the person's activity. There is a focus on the principles and practice of human response, which incorporates psychology, physiology and environmental physics with applied ergonomics. Water requirements, computer modeling and computer-aided design are brought in, as are current standards. Special populations, such as the aged or disabled and specialist environments such as those found in vehicles are also considered. This book continues to be the standard text for the design of environments for humans to live and work safely, comfortably and effectively, and for the design of materials which help the same people cope with their environments.

Marketing theory is often developed in isolation not collaboration; theoretical perspectives sometimes are ignorant of the diversity of marketing practice. In "The roots and uses of marketing knowledge: a critical inquiry into the theory and practice of marketing", the author engages with the vital conversation about how marketing knowledge is created, disseminated and consumed, looking beyond the traditional reification of practice in theory and verification of theory in practice. The ontology of this work is anchored in subjective individual meaning; the epistemological stance assumes that this meaning is socially constructed. Consequently, rich empirical data, grounded in the context of experiential evidence, is extracted from a comprehensive range of marketing constituencies: academics, practitioners, managers, consultants, authors, lecturers and students. In its examination of the polarities, hybridity and iterative flow of marketing knowledge creation and consumption, this text posits a cohesive argument for a theory/practice bipartite fusion not dichotomy, adding valuable insights into the textual, contextual and pedagogical representations of marketing knowledge. The history and future of marketing knowledge is examined with the aid of instructive illustrations and insightful first-hand experience. Drawing on extensive qualitative research from a broad range of influential producers and vital consumers, Dr. Smith presents a relevant, exciting marketing knowledge framework which will be a vital resource for academics, students and practitioners.

Dietary Reference Intakes for Water, Potassium, Sodium, Chloride, and Sulfate The Dietary Reference Intakes (DRIs) are quantitative estimates of nutrient intakes to be used for planning and assessing diets for healthy people. This new report, the sixth in a series of reports presenting dietary reference values for the intakes of nutrients by Americans and Canadians, establishes nutrient recommendations on water, potassium, and salt for health maintenance and the reduction of chronic disease risk. Dietary Reference Intakes for Water, Potassium, Sodium, Chloride, and Sulfate discusses in detail the role of water, potassium, salt, chloride, and sulfate in human physiology and health. The major findings in this book include the establishment of Adequate Intakes for total water (drinking water, beverages, and food), potassium, sodium, and chloride and the establishment of Tolerable Upper Intake levels for sodium and chloride. The book makes research recommendations for information needed to advance the understanding of human requirements for water and electrolytes, as well as adverse effects associated with the intake of excessive amounts of water, sodium, chloride, potassium, and sulfate. This book will be an invaluable reference for nutritionists, nutrition researchers, and food manufacturers.
