challenges in rural and regional contexts, metropolitan areas, among low socio-economic populations and Indigenous communities are considered. Ways in which technology, and in particular mobile technology, can be used to support learning across these diverse contexts are illustrated, as is the role of reflective practice to encourage critical reflection for improving teacher learning. Collectively, the authors present a range of directions that can guide the future of teacher education both nationally and internationally, demonstrating that context, partnerships, reflection and technology are critical elements in the provision of successful teacher education.

Presenting the results of an ambitious project, this book summarizes the efforts towards an open, web-based modular and extendable simulation platform for materials engineering that allows simulations bridging several length scales. In so doing, it covers processes along the entire value chain and even describes such different classes of materials as metallic alloys and polymers. It comprehensively describes all structural ideas, the underlying concepts, standard specifications, the verification results obtained for different test cases and additionally how to utilize the platform as a user and how to join it as a provider. A resource for researchers, users and
