My 6 year old model 0055180 with a GH-410 engine cranks well but will not start (or [U]occasionally [U] does start after a lot of cranking.) When I crank it, it turns over a few times and then there is a gentle backfire. It continues to crank a little more then backfires again. If it does start, it runs fine except that it surges a little.

This book provides a comprehensive introduction to ferroics and frustrated materials. Ferroics comprise a range of materials classes with functionalities such as magnetism, polarization, and orbital degrees of freedom and strain. Frustration, due to geometrical constraints, and disorder, due to chemical and/or structural inhomogeneities, can lead to glassy behavior, which has either been directly observed or inferred in a range of materials classes from model systems such as artificial spin ice, shape memory alloys, and ferroelectrics to electronically functional materials such as manganites. Interesting and unusual properties are found to be associated with these glasses and have potential for novel applications. Just as in prototypical spin glass and structural glasses, the elements of frustration and disorder lead to non-ergodicity, history dependence, frequency dependent relaxation behavior, and the presence of inhomogeneous nano clusters or domains. In addition, there are new states of matter, such as spin ice; however, it is still an open question as to whether these systems belong to the same family or universality class. The purpose of this work is to collect in a single volume the range of materials systems with differing functionalities that show many of the common characteristics of geometrical frustration, where interacting degrees of freedom do not fit in a lattice or medium, and glassy behavior is accompanied by additional presence of disorder. The chapters are written by experts in their fields and span experiment and theory, as well as simulations. Frustrated Materials and Ferroic Glasses will be of interest to a wide range of readers in condensed matter physics and materials science.

Respected for its accuracy, its smooth and logical flow of ideas, and its clear presentation, 'Field and Wave Electromagnetics' has become an established textbook in the field of electromagnetics. This book builds the electromagnetic model using an axiomatic approach in steps: first for static electric fields, then for static magnetic fields, and finally for time-varying fields leading to Maxwell's equations.

Featuring contributions from worldwide leaders in the field, the carefully crafted Electric Power Generation, Transmission, and Distribution, Third Edition (part of the five-volume set, The Electric Power Engineering Handbook) provides convenient access to detailed information on a diverse array of power engineering topics. Updates to nearly every chapter keep this book at the forefront of developments in modern power systems, reflecting international standards, practices, and technologies. Topics covered include: Electric power generation: nonconventional methods Electric power generation: conventional methods Transmission system Distribution systems Electric power utilization Power quality L.L. Grigsby, a respected and accomplished authority in power engineering, and section editors Saifur Rahman, Rama Ramakumar, George Karady, Bill Kersting, Andrew Hanson, and Mark Halpin present substantially new and revised material, giving readers up-to-date information on core areas. These include advanced energy technologies, distributed utilities, load characterization and modeling, and power quality issues such as power system harmonics, voltage sags, and power quality monitoring. With six new and 16 fully revised chapters, the book supplies a high level of detail and, more importantly, a tutorial style of writing and use of photographs and graphics to help the reader understand the material. New chapters cover: Water Transmission Line Reliability Methods High Voltage Direct Current Transmission System Advanced Technology High-Temperature Conduction Distribution Short-Circuit Protection Linear Electric Motors A volume in the Electric Power Engineering Handbook, Third Edition. Other volumes in the set: K12648 Power Systems, Third Edition (ISBN: 9781439856338) K13917 Power System Stability and Control, Third Edition (ISBN: 9781439883204) K12650 Electric Power Substations Engineering, Third Edition (ISBN: 9781439856383) K12643 Electric Power Transformer Engineering, Third Edition (ISBN: 9781439856291)

The cucurbits (Cucurbitaceae, or gourd family), which include squash, pumpkin, melon, cucumber, and watermelon, have long been of economic significance. As sources of vegetables, fruit, and seeds rich in oils and protein, they have the potential of making an even larger contribution toward meeting the needs of humankind. This book, consisting of 37 papers by 50 cucurbit specialists, emphasizes the practical importance of cucurbit investigation, and also provides a broad overview of the family.

Linda Curtis was raised as a Jehovah's Witness and is an unquestioning true believer who has knocked on doors from the time she was nine years old. Like other Witnesses, she has been discouraged from pursuing a career, higher education, or even voting, and her friendships are limited to the Witness community. Then one day, at age thirty-three, she knocks on a door and a coworker she deeply respects answers the door. To their mutual consternation she launches into her usual spiel, but this time, for the first time ever, the message sounds hollow. In the months that follow, Curtis tries hard to overcome the doubts that spring from that doorstep encounter, knowing they could upend her (safe) existence. But ultimately, unable to reconcile her incredulity, she leaves her religion and divorces her Witness husband a choice for which she is shunned by the entire community, including all members of her immediate family. Shunned follows Linda as she steps into a world she was taught to fear and discovers what is possible when we stay true to our hearts, even when it means disappointing those we love.

Catheter Ablation of Atrial Fibrillation Edited by Etienne Aliot, MD, FESC, FACC, FHRS Chief of Cardiology, Hôpital Central, University of Nancy, France Michel Haïssaguerre, MD Chief of Electrophysiology, Hôpital Cardiologique du Haut-Lévêque, France Warren M. Jackman, MD Chief of Electrophysiology, University of Oklahoma Health Science Center, USA In this text, internationally recognized authors explore and explain the advances in basic and clinical electrophysiology that have had the greatest impact on catheter ablation of atrial fibrillation (AF). Designed to assist in patient care, stimulate research projects, and continue the remarkable advances in catheter ablation of AF, the book covers: the fundamental concepts of AF, origin of signals, computer simulation, and updated reviews of ablation tools the present practical approaches to the ablation of specific targets in the fibrillating atria, including pulmonary veins, atrial neural network, fragmented electrograms, and linear lesions, as well as the strategies in paroxysmal or chronic AF or facing left atrial tachycardias the special challenge of heart failure patients, the impact of ablation on mortality, atrial mechanical function, and lessons from surgical AF ablation Richly illustrated by numerous high-quality images, Catheter Ablation of Atrial Fibrillation will help every member of the patient care team.

Consisting of 13 chapters, this book is uniformly written to provide sensible, matter-of-fact methods for understanding and caring for patients with permanent pacemakers, ICDs and CRT systems. Now improved and updated, including a new chapter on programming and optimization of CRT devices, this second edition presents a large amount of information in an easily digestible form. Cardiac Pacing and Defibrillation offers sensible, matter-of-fact methods for understanding and caring for patients, making everyday clinical encounters easier and more productive. Readers will appreciate the knowledge and experience shared by the authors of this book.

The sweeping story of how the greatest minds of the Scientific Revolution applied their new ideas to people, money, and markets and along the way, invented modern finance. **LONGLISTED FOR THE FINANCIAL TIMES AND MCKINSEY BUSINESS BOOK OF THE YEAR AWARD** An astounding episode from the early days of financial markets that to this day continues to intrigue and perplex historians... narrative history at its best, lively and fresh with new insights. Liaquat Ahamed, Pulitzer Prize-winning author of Lords of Finance Money for Nothing chronicles the moment when the needs of war, discoveries of natural philosophy, and ambitions of investors collided. It's about how the Scientific Revolution intertwined with finance to set England and the world off in an entirely new direction. At the dawn of the eighteenth century, England was running out of money due to a prolonged war with France. Parliament tried raising additional funds by selling debt to its citizens, taking in money now with the promise of interest later. It was the first permanent national debt, but still they needed more. They turned to the stock market a relatively new invention itself where Isaac Newton's new mathematics of change over time, which he applied to the motions of the planets and the natural world, were fast being applied to the world of money. What kind of future returns could a person expect on an investment today? The Scientific Revolution could help. In the hub of London's stock market Exchange Alley, the South Sea Company hatched a scheme to turn pieces of the national debt into shares of company stock, and over the spring of 1720 the plan worked brilliantly. Stock prices doubled, doubled again, and then doubled once more, getting everyone in London from tradespeople to the Prince of Wales involved in money mania that consumed the people, press, and pocketbooks of the empire. Unlike science, though, with its tightly controlled experiments, the financial revolution was subject to trial and error on a grand scale, with dramatic, sometimes devastating, consequences for people's lives. With England at war and in need of funds and "stock-jobbers" looking for any opportunity to get in on the action, this new world of finance had the potential to save the nation but only if it didn't bankrupt it first.
