Introduce kids to stop-motion animation and animated filmmaking. Animation is everywhere--from movies and TV to apps and video games--and today's tech-savvy kids know all about it. With the accessibility and ease of use of cameras and video-editing software, people of all ages are learning how to make stop-motion animation. In "Animation Lab for Kids," artists, teachers, and authors Laura Bellmont and Emily Brink present exciting, fun, hands-on projects that teach kids a range of animation techniques. From the classic zoetrope, flip book, and cel methods (which don't require any devices or technology) to different methods of shooting, the lessons require no previous experience for either child or adult. Experimenting with a variety of art materials (drawing, clay, and paper cut-outs), young animators will learn to plan a film through writing, storyboarding, and creating sets. The book also features helpful and informative sidebars on the history of the early animation techniques as well as the inspiring work of innovative and influential animators, including Kirsten Lepore, PES, Hailey Morris, and William Kentridge. The authors are co-founders and lead teachers of The Good School, an arts-education school that cultivates and combines traditional art-making skills and the technologies involved in stop-motion animation filmmaking. They teach animation techniques at camps, schools, and events, including the New York International Children's Film Festival.

Animating with Stop Motion Pro is comprehensive, hands-on guide to achieving professional results with Stop Motion Pro 7.0 software. Gone are the days of stop motion guesswork and waiting to see the finalized result of your meticulous, labor intensive animations. With the push of a mouse button and the Stop Motion Pro software, animators have ten times the capability of simple camera stop motion capture. Re-visualize stop motion character movements, graph these movements and composite characters into a flawless animations with the techniques and step by step tutorials featured in Animating with Stop Motion Pro. Detailed exercises allow you to develop professional animations with the included free trial of Stop Motion Pro 7.0.

Based on a world-class curriculum and cutting-edge industry practices, Stop Motion Filmmaking offers step-by-step instruction in everything from puppet making and studio set-up to animation and filmmaking. Reflecting exciting advancements in the medium, animator and educator Christopher Walsh focuses closely on digital filmmaking techniques, and offers specific instruction for creating 3D designed and printed puppet components as well as hand-crafted elements. The book is enriched by exclusive online content in the form of detailed tutorials and examples, and by dynamic sidebars and inserts. Further accented by interviews with leading professionals from both the independent and major studio worlds, Stop Motion Filmmaking is designed for dedicated students of the art form, and

provides invaluable training for any serious artist who is driven to bring frame-by-frame worlds to life through puppet animation.

Stop-motion puppet animation is one of the most unusual and demanding art forms in the world. It uses a variety of skills, including design, sculpting, metal work, mold making and casting, taxidermy, filmmaking, storytelling and acting, and can be seen in the simplest commercial spots on television to more complex animated shorts and science fiction and fantasy feature films. This work explains research and design of puppets, and details the fabrication of stop-motion puppets around a metal armature skeleton using the build up and foam injection processes. The former technique uses pre-cut blocks of foam formed with a pair of scissors or other instrument into the shape desired and attaching them to the armature. In the latter technique, the character is sculpted in clay over the armature. This clay sculpture is then replaced with foam by using a plaster mold and injection gun techniques. Finishing techniques described include the making of hair, eyes, eyelids, teeth, horns, nails, and chitinous (insect-shell-like) surfaces. The manual also covers the process of creating replacement heads using rubber molds (such as RTV) and urethane castings. A glossary and bibliography complete the extensively illustrated work.

To make great animation, you need to know how to control a whole world: how to make a character, how to make that character live and be happy or sad. You need to create four walls around them, a landscape, the sun and moon - a whole life for them. You have to get inside that puppet and first make it live, then make it perform. Susannah Shaw provides the first truly practical introduction to the craft skills of model animation. This is a vital book in the development of model animation which, following the success of Aardman's first full-length film, *Chicken Run*, is now at the forefront of modern animation. Illustrated in full colour throughout you are shown step by step how to create successful model animation. Starting with some basic exercises, you will learn about developing a story, making models, creating set and props, the mechanics of movement, filming, postproduction and how to set about finding that elusive first job in a modern studio. Susannah Shaw is Programme Development Manager for the Animated Exeter festival. She was head of the Bristol Animation Course from 1996 to 2000 at the University of the West of England and former camera assistant at Aardman (working on 'A Close Shave' among other films).

Packed with step-by-step tutorials and inside tips and advice from professional animators, *Stop-motion Animation* is the ultimate handbook for anyone seeking to explore the exciting possibilities afforded by stopmotion animation. With its highly accessible approach and use of inspirational, bang up-to-date examples, the book is guaranteed to appeal to a hip new generation of recreational animators, as well as artists, photographers, and creatives of all stripes seeking new outlets for their creativity. Combining a winning formula of practical instruction and creative inspiration, *Stop-motion Animation* examines a wide range of stop-motion techniques, covering traditional forms such as claymation and cut-out animation, as well as innovative new techniques that use everyday items such as Lego and post-it notes. Engaging interview-style case studies explore the work of some of today ' s most exciting stop-motion practitioners, providing readers with an invaluable insight into their working processes, while detailed tutorials illustrate a range of both basic and more advanced techniques, from making a basic puppet to shooting with an iPhone. QR codes (readable from any smartphone) accompany each tutorial, linking directly to online videos which reveal the finished piece of animation, as well as to videos of digital tutorials which provide a moving screen capture. Readers will also learn easy post-production techniques for editing files and creating animated movies on both Macs and PCs.

Meet the claymates: two balls of clay that can become anything--even best friends! What can you do with two blobs of clay? Create something amazing! But don't leave them alone for too long. Things might get a little crazy. In this photographic friendship adventure, the claymates squish, smash, and sculpt themselves into the funniest shapes imaginable. But can they fix a giant mess before they're caught in the act?

In a world that is dominated by computer images, alternative stop motion techniques like pixilation, time-lapse photography and down-shooting techniques combined with new technologies offer a new, tangible and exciting approach to animation. With over 25 years professional experience, industry veteran, Tom Gasek presents a comprehensive guide to stop motion animation without the focus on puppetry or model animation. With tips, tricks and hands-on exercises, *Frame by Frame* will help both experienced and novice filmmakers get the most effective results from this underutilized branch of animation. Practical insight and inspiration from leading filmmakers like PES (Western Spaghetti Creator, Time Magazine's #2 Viral Video of 2008), Dave Borthwick, of the Bolex Brothers and more! The accompanying website will include further content driven examples, indexes of stop motion software, a recommended film list and tools and resources for the beginner and intermediate stop motion artist, animators and filmmakers.
