Hematoma is a condition in which the blood accumulates beneath the skin. It may appear as a bruise. This condition is often caused by a body injury that causes blood vessels to rupture and bleed. Large hematoma can be dangerous because the pressure of blood vessels can squeeze blood vessels and block blood flow.

Hematoma is generally defined as a collection of blood outside of blood vessels. Most commonly, hematomas are caused by an injury to the wall of a blood vessel, prompting blood to seep out of the blood vessel into the surrounding tissues. A hematoma can result from an injury to any type of blood vessel (artery, vein, or small capillary).

Homeland Security Austere Emergency Medical Support (AEMS) Field Guide The following protocols outline the emergency medical support that can be administered under austere conditions by emergency medical services (EMS) providers credentialed by the Department of Homeland Security (DHS) Offi ce of Health Affairs (OHA). These protocols

are intended to supplement the DHS/OHA Basic Life Support (BLS) and Advanced Life Support (ALS) protocols when providers are operating in austere environments. The protocols guide the management of individual patients while considering the circumstances under which patient evaluation and treatment may occur. Any given patient may require the use of a single protocol, a portion of a protocol, or a combination of several protocols. OHA expects that providers will use the protocols to assess, and to establish a treatment plan for each patient. 3. Kumar and colleagues 'Neurocritical Care Management of the Neurosurgical Patient provides the reader with thorough coverage of neuroanatomical structures, operative surgical approaches, anesthetic considerations, as well

as the full range of known complications relating to elective and non-elective neurosurgical procedures. Drawing upon the expertise of an interdisciplinary team of physicians from neurosurgery, neurology, anesthesiology, critical care, and nursing backgrounds, the text covers all aspects intensivists need to be aware of in order to provide optimal patient care. Over 100 world-renowned authors from multispecialty backgrounds (neurosurgeons, neurointerventionalists, and neurointensivists) and top institutions contribute their unique perspectives to this challenging field. Six sections cover topics such as intraoperative monitoring, craniotomy procedures,

Page 31/35

neuroanesthesiology principles, spine and endovascular neurosurgery, and additional specialty procedures. Includes 300 tables and boxes, 70 line artworks, and 350 photographic images. Clinical pearls pulled out of the main text offer easy reference.

This survival guide provides musthave information on the neurologic history and physical examination, neuroanatomy, specific neuroimaging techniques and diagnostic tools, and patient problems such as stroke, seizures, vertigo, dizziness, and ataxia, acute vision loss, headache, movement disorders, dementia, and sleep disorders. A listing of neurological Internet resources is included. Compatibility:

This textbook is a readily accessible educational tool for all fellows undertaking subspecialty training in interventional cardiology, while also serving as a refresher to early career interventional cardiologists. The key objective is to equip the reader with an evidence-based expert-led resource focussed primarily on pre-procedural

planning, peri-procedural decisionmaking, and the salient technical aspects of performing safe and effective coronary intervention, the intention being to support the therapeutic decision-making process in the emergency room, coronary care unit or cath lab in order to optimize patient outcome. The Interventional Cardiology Training Manual provides readers with a step-by-step guide to the basic principles underpinning coronary intervention and facilitates rapid access to best practice from the experts, presented in a pragmatic. digestible and concise format. Uniquely, each chapter has been written in a heart center-specific manner, affording the reader an opportunity to learn how individual Page 34/35

institutions perform a specific procedure, which algorithms and guidelines they follow and what evidence they draw on to instigate the best possible care for their patients.
