Before the 20th century, the term 'historical geography' was used to describe at least three distinct intellectual endeavours: the recreation of the geographies described in the Bible and in 'classical' Greek and Roman narratives; the 'geography behind history' as revealed by the changing frontiers and borders of states and empires; and the history of geographical exploration and discovery.

Historical Geography - Articles - Making History

Hailed as a breakthrough in the understanding of human evolution, The History and Geography of Human Genes offers the first full-scale reconstruction of where human populations originated and the paths by which they spread throughout the world. By mapping the worldwide geographic distribution of genes for over 110 traits in over 1800 primarily aboriginal populations, the authors charted migrations and devised a clock by which to date evolutionary history.

The History and Geography of Human Genes: (Abridged ...

Pangaea: 250 - 200 million years ago In the shifting story of the face of the earth, the land surface merges into one single continent about 250 million years ago. It is from this land mass that our own geography has gradually emerged. This continent has been given the name Pangaea (Greek for 'all earth').

HISTORY OF GEOGRAPHY

The first law of geography was developed by Waldo Tobler in 1970 and it makes the observation that ‘everything is usually related to all else but those which are near to each other are more related when compared to those that are further away’. More: First Law of Geography.

History of Geography as a Timeline - Geography Realm

In the gradual spread of ancient Greek textsto medieval Europe, manuscripts of Ptolemy become known by 1400. His account of world geography is widely available after it is translated into Latin in 1410. With the arrival of printing later in the century, a world map based on Ptolemy's information is a natural project for the publishers.

HISTORY OF GEOGRAPHY

According to NationalGeographic.com, the relationship between history and geography stems from "geographical factors having impacted the course of history in many ways." Every historical event has taken place in a geographic location. Because of this connection, history and geography are forever linked. Advertisement.

Differences: Basis History Geography Definition (www.oxforddictionaries.com) The study of past events particularly in human affairs. The study of past events particularly in human affairs.

Difference between history and geography - Difference All

Historical geography, geographic study of a place or region at a specific time or period in the past, or the study of geographic change in a place or region over a period of time. The writings of Herodotus in the 5th century bce, particularly his discussion of how the Nile River delta formed, probably provide the earliest example of what would be called historical geography today.

Historical geography | Britannica

Biblical Geography is important because God is in history, and history is forever connected to the geography of the land from which the events in history occurred. All the events in the Bible happened in time, and happened in a certain place, on a mountain or near a river, on a boat in a lake, in a valley, or on the seacoast.

Biblical Geography (Bible History Online)

Historical geography is the branch of geography that studies the ways in which geographic phenomena have changed over time. It is a synthesizing discipline which shares both topical and methodological similarities with history, anthropology, ecology, geology, environmental studies, literary studies, and other fields.

Historical geography - Wikipedia

A brief history and geography of China from the most ancient dynasty to 1900. Note that the borders of what was designated as “China” varied over the centuries, though the fertile area along the Yellow R i ver (Huang He) in Northern China was always central. From the earliest recorded times, the Chinese have produced beautiful bronzes, pottery, jade and silk - unique arts with exquisite ...

The period from the fifth century to the eighth century witnessed massive political, social and religious change in Europe. Geographical and historical thought, long rooted to Roman ideologies, had to adopt the new perspectives of late antiquity. In the light of expanding Christianity and the evolution of successor kingdoms in the West, new historical discourses emerged which were seminal in the development of medieval historiography. Taking their lead from Orosius in the early fifth century, Latin historians turned increasingly to geographical description, as well as historical narrative, to examine the world around them. This book explores the interdependence of geographical and historical modes of expression in four of the most important writers of the period: Orosius, Jordanes, Isidore of Seville and the Venerable Bede. It offers important readings of each by arguing that the long geographical passages with which they were introduced were central to their authors' historical assumptions and arguments.

A study of the school textbook grounded in historical and comparative perspectives. The approach is broadly chronological, revealing changes in the theory and practice of textbook production and use. The book focuses largely on three associated subjects - geography, history and social studies.

This 1897 textbook traces the progress of geographical writing from Homeric times to the end of Rome's western empire.

Now in a fourth edition, this standard student reference has been totally revised and updated. It remains the definitive introduction to the history, philosophy, and methodology of human geography; now including a detailed explanation of key ideas in human geography's post-modernist and post-structuralist 'turns'. The book is organized into six sections: What is Geography?: an introduction to the discipline, and a discussion of its organization and basic research approaches, informed by the question 'what difference does it make to think geographically?' Foundations of Geography: an examination of geography from Antiquity to the 1950s, with a special focus on human/environment relation. Geography 1950-1980: a critical review of the development of geography as a spatial science. Paradigms and Revolutions: an analysis of paradigm shifts in geography, introducing students to key debates in the philosophy of science. Positivism and its Critics: a detailed discussion of positivism, critical theory, humanistic geography, behavioural geography, and structuralism. New Trends and Ideas developing critical responses: structuration theory, realism, post-structuralism, post-modernism, feminism and actor-network theory. This text explores complex ideas in an intelligible and accessible style. Illustrated throughout with research examples and explanations in text boxes, questions for discussion at the end of each chapter and a concept glossary, this is the essential student companion to the discipline.

'Human Geography' examines the major trends, debates, research and conceptual evolution of human geography during the twentieth century. Considering each of the subject's primary subfields in turn, it addresses developments in both continental European and Anglo-American geography, providing a cutting-edge evaluation of each. Written clearly and accessibly by leading researchers, the book combines historical astuteness with personal insights and draws on a range of theoretical positions. A central theme of the book is the relative decline of the traditional subdisciplines towards the end of the twentieth century, and the continuing movement towards interdisciplinarity in which the various strands of human geography are seen as inextricably linked. This stimulating and exciting new book provides a unique insight into the study of geography during the twentieth century, and is essential reading for anyone studying the history and philosophy of the subject.

This book examines the history of the concept of a North-South divide in England during the last millennium. This concept has surfaced in recent political debates about regional contrasts in wealth and welfare in England, but it has deep historical roots. Each of six essays concerned with different historical periods between 1086 and 2000 examines both the material geography of England, in terms of its broad regional differences in population, economy, society and culture, and the geography of England as imagined by people in those periods.

This 1948 book provides a detailed study of the contribution of ancient societies to the development of geography, both in terms of theory and practical discovery. The text concentrates mainly on the perspectives of Greece and Rome, but other historical periods and regions are given attention, including ancient Egypt and China.

History, Geography and Civics provides an in-depth and engaging introduction to teaching and learning socio-environmental education from F-6 in Australia and New Zealand. It explores the centrality of socio-environmental issues to all aspects of life and education and makes explicit links between pedagogical theories and classroom activities. Part I introduces readers to teaching and learning history, geography and environmental studies, and civics and citizenship, as well as issues in intercultural and global education. Part II explores the use of media and sources, values and attitudes, assessment and creative teaching. Each chapter provides links to the Australian Curriculum, including cross-curriculum priorities: sustainability, Aboriginal and Torres Strait Islander education, and Asia and Australia's engagement with Asia. History, Geography and Civics encourages the reader to consider their own beliefs, values and attitudes in relation to their teaching and includes provocations and reflective questions to foster discussion and engagement.
