If you are looking to automate repetitive tasks in Active Directory management using the PowerShell module, then this book is for you. Any experience in PowerShell would be an added advantage.

Over the past ten years, operators have heavily invested in network infrastructure because of exploding growth in IP traffic. Moreover, the lack of close interaction between applications and network infrastructure has made the situation even worse: Traffic engineering solutions fell short of expectations, and as a result, network infrastructures are largely underutilized. Implementation and operational complexity have led to a surge in operating expenditures, along with greater network instability. Segment Routing (SR) addresses these challenges by focusing on operational simplicity, better scale, and better application utilization of the installed infrastructure. SR achieves this by moving state from the network to the packet header. This simplifies and scales the network while putting the application in control. For the first time in the IP industry, applications program inter-domain SLA-enabled policies at scale through the Data Center, the metro/aggregation and the backbone. Segment Routing has been designed from day one for SDN and seeks the right balance between distributed intelligence, centralized optimization, and application-based policy creation. Many operators across different market segments - Over-The-Top, Hyper-Scale Cloud, Service Providers, Enterprise - have publicly expressed their investment into Segment Routing as the de-facto SDN architecture. This book aims at sharing and explaining the technology to a broad audience. Formal concepts are introduced together with the use-cases that lead to their definition. Doing so, the reader follows the insights and experience of the inventor of the technology and understands why it was designed this way. To further enhance the practical understanding of the technology, the authors have collected opinions from many operators who worked with them during this project. These insights help the reader to better understand the objective and benefits of the technology and its numerous deployment use-cases. This book is also available in Kindle ebook format

Constitutional Patriotism offers a new theory of citizenship and civic allegiance for today's culturally diverse liberal democracies. Rejecting conventional accounts of liberal nationalism and cosmopolitanism, Jan-Werner Müller argues for a form of political belonging centered on universalist norms, adapted for specific constitutional cultures. At the same time, he presents a novel approach to thinking about political belonging and the preconditions of democratic legitimacy beyond the nation-state. The book takes the development of the European Union as a case study, but its lessons apply also to the United States and other parts of the world. Müller's essay starts with an engaging historical account of the origins and spread of the concept of constitutional patriotism-the idea that political attachment ought to center on the norms and values of a liberal democratic constitution rather than a national culture or the "global human community." In a more analytical part, he then proposes a critical conception of citizenship that makes room for dissent and civil disobedience while taking seriously a polity's need for stability over time. Müller's theory of constitutional patriotism responds to the challenges of the de facto multiculturalism of today's states-with a number of concrete policy implications about immigration and the preconditions for citizenship clearly spelled out. And it asks what civic empowerment could mean in a globalizing world.

This IBM® Redbooks® publication shows how to integrate IBM Software Defined Network for Virtual Environments (IBM SDN VE) seamlessly within a new or existing data center. This book is aimed at pre- and post-sales support, targeting network administrators and other technical professionals that want to get an overview of this new and exciting technology, and see how it fits into the overall vision of a truly Software Defined Environment. It shows you all of the steps that are required to design, install, maintain, and troubleshoot the IBM SDN VE product. It also highlights specific, real-world examples that showcase the power and flexibility that IBM SDN VE has over traditional solutions with a legacy network infrastructure that is applied to virtual systems. This book assumes that you have a general familiarity with networking and virtualization. It does not assume an in-depth understanding of KVM or VMware. It is written for administrators who want to get a quick start with IBM SDN VE in their respective virtualized infrastructure, and to get some virtual machines up and running by using the rich features of the product in a short amount of time (days, not week, or months).

With worldwide spending estimates of over \$97 billion by 2023, it is no surprise that Artificial Intelligence (A.I.) is one of the hottest topics at present in both the private and public spheres. Comprising of vital contributions from the most influential researchers in the field, including Daniel Dennett, Roman V. Yampolskiy, Frederic Gilbert, Stevan Harnad, David Pearce, Natasha Vita-More, Vernon Vinge and Ben Goertzel, (The Age of Artificial Intelligence: An Exploration) discusses a variety of topics ranging from the various ethical issues associated with A.I. based technologies to terms of morality and law to subjects related to artificial consciousness, artistic creativity and intelligence. The volume is organized as follows: Section I is dedicated to reflections on the Intelligence of A.I. with chapters by Soerike Ziesche and Roman V. Yampolskiy, Stevan Harnad, Daniel Dennett and David Pearce. Next, Section II discusses the relationship between consciousness, simulation and artificial intelligence, with chapters by Gabriel Axel Montes and Ben Goertzel, Cody Turner, Nicole Hall and Steven S. Gouveia. Section III, dedicated to aesthetic creativity and language in artificial intelligence, includes chapters by Caterina Moruzzi, René Møgelensen, Mariana Chinelato Ferreira and Kulvinder Panesar. The subsequent Section IV is on the Ethics of the Bionic Brain with the participation of Peter A. DePergola II, Tomislav Miletić and Frederic Gilbert, Anbal M. Astobiza, Txetxu Auzin, Ricardo M.
