The iMac G5 was originally released in August 2004. It uses a PowerPC 970 processor which Apple dubbed the "G5.". The all-in-one machine uses the same display found in the previous iMac G4, but all the internals of the G5 are inside a rectangular case just behind the display. The main body of the machine is held up with a curved aluminum foot, a piece of design language that stuck around in the product line for many years.

Designing for User Engagement on the Web: 10 Basic Principles is concerned with making user experience engaging. The cascade of social web applications we are now familiar with — blogs, consumer reviews, wikis, and social networking — are all engaging experiences. But engagement is an increasingly common goal in business and productivity environments as well. This book provides a foundation for all those seeking to design engaging user experiences rich in communication and interaction. Combining a handbook on basic principles with case studies, it provides readers with a rich understanding of engagement: extending a welcome, setting the context, making a connection, sharing control, supporting interaction, creating a sense of place, and planning to continue the engagement. Based on research funded by the Society for Technical Communication, the case studies illustrate how designers build community in order to support education, connect kids to community resources, introduce users to other cultures, foster collaboration, encourage activism, and much more. Whatever your motive, if you aim to create engaging user experiences, you will want to explore Designing for User Engagement on the Web.

The first ever successful computer with a GUI, ability to allow users to preview a document before printing, and a mouse was the Mac. The following are the reasons why it has remained relevant all these years. Turned Icons into Art Since Mac was the first computer with a GUI, it was the first to have icons. Susan Kare designed those first icons for Mac. Macs Beg to Be Networked Back when the Mac was launched, computer networking was exotic and pricey; but even then, Macs could be easily connected to each other. HyperCard Partly Inspired the Web The HyperCard was created by Bill Atkinson in 1987. Through this app, anyone could create on-screen cards with hyperlinks, images, or texts. The Mac laptop is advanced right out of the box, it comes with many basic tools such as calendar management, email, etc. However, there is another world of powerful software for Apple Mac that will make complicated tasks easier. Although most of them are not free, they only cost a few bucks and they are well worth it. Here are some of the best.
