The International Harvester Company (IHC) has been building its own proprietary truck engines since the introduction of their first truck in 1907. International tended to use proprietary diesel engines. In the 1970s, IHC built the DVT 573 V-8 diesel of 240 and 260 hp (179 and 194 kW) but these were not highly regarded and relatively few were sold.

Second edition. Fred Crismon's timeless classic. A photographic history of International Trucks from 1902-2002. Approximately 2500 b/w photos. Considered by many to be the most authoritative work ever done on International Trucks.

Excerpt from International Harvester Mogul Oil Engines for Farm Work: To Operate on Kerosene, Distillate, Solar Oil, Gas Oil, Motor Spirits, Gasoline, or Naphtha: 1 to 50-H. P.; Stationary, Mounting, Skidded, Portable Types; Special Catalog on Larger Units and Tractors Will Be Furnished on Request Farm work is hard on machinery. The dust and dirt gets into it and cuts the bearings. The exposure to rain and often snow rusts the parts, the farmer cannot afford to watch his machinery constantly, therefore it often runs out of oil. That's why ordinary engines will not stand up on farm work and that's why the Mogul line of engines was designed. Every adverse condition that an engine is liable to meet on the farm has been taken care of in the Mogul line of engines. The crank case is completely enclosed to keep out dust and dirt. The governor is protected by a case, and many parts are brass or enameled to prevent rust. An automatic force feed oiler on all sizes above 4 H. P. Absolutely prevents the main bear ings running dry as long as there is oil in the reservoir, and above all, every important bearing is adjustable and removable and can be replaced at a slight cost. In fact, every detail of design has been carefully worked out with the one object in view - Reliable Power. About the Publisher:Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.

International Tractor Parts - Used Tractor Parts | Wengers®

The developmental history of the tractors built by the dominant agricultural manufacturer of the early 20th Century, International Harvester, is dramatically told in The Farmall Dynasty. The book traces the evolution of the Farmall tractor from the early Titans and Moguls through to modern times.The book includes well-researched accounts of the development of the original Farmall, the Letter Series, 4100, Cub, and other legendary IHC tractors, with first-hand accounts from factory engineers describing the challenges they faced.

Manual covers petrol and diesel engines.

The Complete Book of Farmall Tractors details the complete evolution of the popular marque's iconic models. The engaging text includes series evolution, historical context, and technical details, accompanied by beautiful contemporary and historic images. In 1923, International Harvester revolutionized the tractor world by conceiving the Farmall brand, a revolutionary new line of all-purpose tractors designed for small- to medium-sized farms. Eventually offering an array of engine and equipment options, by the 1930s Farmalls were bestowed with letters as their model names, from the compact A, B, and C models to the larger H and M tractors. Fittingly known as the "Letter Series," the tractors were even given a streamlined design by famed industrial designer Raymond Loewy. Not surprisingly, they went on to become some of the most widely produced and best-selling American farm tractors of all time, to be followed beginning in 1954 with the numbered Hundred Series models. By 1947, Farmall had built over 1 million tractors. Amazingly, many are still in use today, not just as collector vehicles, but often as working farm tractors. In The Complete Book of Farmall Tractors, tractor historian Robert Pripps explores the entire range of Farmall tractors, from their inception to their final model year in 1973. Pripps includes all models, from Diesel and LPG versions to orchard tractors. Pripps also explains the evolution of Farmall lines and gives coverage to the entry-market Cub unveiled in 1947, as well as the Hundred Series, right up to the cancellation of the Farmall name in 1973. Through engaging text and fascinating photography, The Complete Book of Farmall Tractors preserves the story of the legendary pioneering machines in detail. The book's content is organized chronologically, and its detailed text shines a light on Farmall's long history and evolution. Beautiful images, both modern and historic, bring the story to life and thorough spec tables highlight key technical and performance specifications. The result is the ultimate reference to some of the most popular farm tractors in history.

International Tractor Parts - Used Tractor Parts | Wengers®

This book comprehensively documents the International Harvester Company ´s activities from its inception to its merger with Case as Case IH and their influence in Australia and New Zealand. IHC began with a merger of harvesting machinery companies to for the International Trust, the world ´s biggest farm machinery enterprise at the time. Then IHC became involved with tractors to become the world ´s largest tractor and full-line machinery maker, setting production records that stand to this day.

The second edition of the award-winning history of International Harvester and Case IH tractors includes data and photos of every model built from 1958 to 2013, as well as in-depth information about how these tractors were designed and constructed. With interviews of engineers and executives, the book covers how the 40 and 60 series were created, and thoroughly covers the red tractors from the 1960s through the 1980s. The book also traces the innovations and struggles of the final days of International Harvester. The authors unearthed a treasure trove of concept drawings and photos of prototype machines to shed new light on how these tractors were created. The book includes the exciting story of the creation of the Case-IH Magnum, an innovative machine that blends some of the great engineering done by IH with the Cummins engine built by Case. The modern era of Case IH is also included, with the story of the creation of the Quadtrac as well as the entire line of tractors. With a mix of new photography of some of the most exceptional collectible models in existence along with hundreds of previously unpublished photographs, this thorough book is the most authoritative guide on red tractors ever published.
