The world of aviation has moved on rapidly since the appearance of the ninth edition of this pre-eminent resource fi ve years ago. Those developments pertain to market access and market behaviour by air carriers, including competition, new perceptions of safety and security, among others in relation to transparency of accident investigation and cybersecurity, case law in the area of airline liability, with new cases from the United States, product liability and insurance, the United Kingdom, and elsewhere, the growing importance of environmental concerns, the rights and obligations of passengers, also in the context of ¶unruly¶ passengers, and innovative methods for fi nancing aircraft. Special attention has been paid in this edition to regional integration movements, especially in Europe, affecting the mentioned subjects. The book's extensive references to other sources in the fi eld have been expanded and updated by the author and experts in specialised areas. The present edition addresses the following topics: - the regulatory framework governing the operation of air services including the principle of sovereignty in national airspace; - the distinction between State and civil aircraft; - dispute settlement in international civil aviation; - economic regulation of international air transport services including the establishment of air services agreements; - inter-airline cooperation in the context of competition law regimes; - liability of the various service providers, in particular airlines, and related insurance coverage; - the promotion of safety standards; - criminal acts affecting the safety of aviation; - the role of international and regional organisations with particular reference to that of the European Union; - liability of the aircraft manufacturer for equipment; and - fi nancial and security interests in mobile equipment. The Principles and Practice of International Aviation Law provides an introduction to, and demystification of, the private and public dimensions of international aviation law. Unlike other global sectors, the air transport industry is not governed by a discrete area of the law, but by disparate transnational regulatory instruments. Everything from the routes that an international air carrier can serve to the acquisition of its fleet and its liability to passengers and shippers for incidents arising from its operations can be the object of bilateral and multilateral treaties that represent diverse and often contradictory interests. Beneath this are hundreds of domestic regulatory regimes that also apply national and international rules in disparate ways. The result is an agglomeration of legal cultures that can leave even experienced lawyers and academics perplexed. By combining classical doctrinal analysis with insights from newer disciplines such as international relations and economics, the book maps international aviation law's complex terrain for new and veteran observers alike.
