This book teaches microeconomics as a way of looking at the world, using plenty of new applications and examples to demonstrate the theory. Because it uses calculus (only in footnotes), this book is considered to be in the upper mid-range in its mathematical rigor. An optimal balance of theory and applications is maintained by working from the specific to the general--with many lively and interesting examples used as a means of developing economic theory in a careful and rigorous way. A seven-part organization covers numerous topics under the headings of: an introduction to microeconomics, individual choice, production and cost, markets for goods, resource markets and general equilibrium, imperfect competition, and uncertainty and asymmetric information. For individuals trying to apply the theory of microeconomics to the economics of the real world.

Macroeconomics is the first text to truly reflect today 's macroeconomy. In this teachable, coherent book, the author makes complex topics easily understandable for undergraduates and combines innovative treatment of both the short run and the

Regulation and antitrust are key elements of government policy. This new edition of the leading textbook on government and business policy explains how the latest theoretical and empirical economic tools can be employed to analyze pressing regulatory and antitrust issues. The book departs from the common emphasis on institutions, focusing instead on the relevant underlying economic issues, using state-of-the-art analysis to assess the appropriate design of regulatory and antitrust policy. Extensive case studies illustrate fundamental principles and provide insight on key issues in regulation and antitrust policy. The text examines regulatory practices through the end of the Obama and beginning of the Trump administrations. New material includes coverage of global competition and the activities of the European Commission; recent mergers, including Comcast-NBC Universal; antitrust in the new economy, including investigations into Microsoft and Google; the financial crisis of 2007-2008 and the Dodd-Frank Act; the FDA approval process; climate change policies; and behavioral economics as a tool for designing regulatory strategies.
