A bimonthly scientific journal, AJCC offers the latest advances in clinical research, with features that highlight bedside applications of select research articles.

An experienced doctor offers a behind-the-scenes picture of an Intensive Care Unit in a large city hospital, presenting true accounts of the patients, doctors, nurses, and medical students who cope with life-affecting decisions every minute of every day.

This volume reviews the state of the art in caring for patients dying in the ICU, focusing on both clinical aspects of managing pain and other symptoms, as well as ethical and societal issues that affect the standards of care received. The book also addresses the changing epidemiology of death in this setting related to managed care, practical skills needed to provide the highest quality of care to terminal patients, communicating with patients and families, the mechanics of withdrawing life-supporting therapies, and the essential role of palliative care specialists in the ICU. The book briefly describes unique issues that arise when caring for patients with some of the more common diseases that precipitate death in the ICU. Contributors for the book were chosen because they have experience caring for patients in the ICU and are also conducting current research to find ways of improving care for terminal patients in this setting.

Revision Notes in Intensive Care Medicine is a key resource for candidates preparing for postgraduate intensive care examinations. Mapped to the FFICM, EDIC and FCICM syllabuses, this title ensures candidates have all the information needed to prepare for their examinations. Information is presented in concise note form and bullet points with visually memorable tools, such as tables and diagrams, making revising and retaining key facts easier. Chapters are arranged into physiological systems, such as 'Respiratory Intensive Care' and 'Obstetric Intensive Care', and are subdivided into major clinical issues within each chapter so specific areas of further study can be found easily. Drawing from the authors' experiences as successful candidates, and carefully reviewed by consultants, Revision Notes in Intensive Care Medicine provides the foundation for postgraduate intensive care exam revision.

Written by a pioneer in critical care ultrasound, this book discusses the basic technique and (signatures) of lung ultrasound and explains its main clinical applications. The tools and clinical uses of the BLUE protocol, which allows diagnosis of most cases of acute respiratory failure, are first described in detail. Careful attention is then devoted to protocols derived from the BLUE protocol | the FALLS protocol for diagnosis and management of acute circulatory failure, the Pink protocol for use in ARDS, and the SESAME protocol for use in cardiac arrest (and to the LUCI-FLK program, a means of answering clinical questions while reducing radiation exposure. Finally, the book discusses all the possible settings in which lung ultrasound can be used, discipline by discipline and condition by condition. Lung Ultrasound in the Critically Ill comprehensively explains how ultrasound can become the stethoscope of modern medicine. It is a superb complement to the author's previous book, Whole Body Ultrasonography in the Critically Ill.

Manual of ICU Procedures is a comprehensive, step-by-step guide to intensive care procedures. The book is divided into five sections, including airway and respiratory; vascular and cardiac; neurological; gastrointestinal, abdominal, and genitourinary procedures. Enhanced by 428 colour images and illustrations, Manual of ICU Procedures is an ideal resource for all critical care professionals.
