This book treats an increasingly important subject, the effective management of technology, and brings an engineer ' s perspective to the discussion. Many engineers and scientists are charged by their organizations with anticipating technology needs of their companies and managing the integration of technology into the workplace. These days it is a critical skill for engineers to make accurate appraisals of trends, costs, and how technologies will benefit the company and the needs of the customer. Khalil ' s book is the only book available in this market that addresses these topics.

The International Association for Management of Technology (IAMOT) is one of the largest scientific associations dedicated to advance the education, research and application of management of technology. The annual IAMOT conference assembles the most prominent scientists and experts in the field. The 17th conference held in 2008 included over 300 papers by experts from various countries. This volume is a collection of the best, high quality papers presented at the conference, covering topics and issues related to the knowledge economy, commercialization of knowledge, green technologies, and sustainable development.

New developments in bio- and nanotechnologies and also in information and communication technologies have shaped the research environment in the last decade. Increasingly, highly educated experts in R&D departments are collaborating with scientists and researchers at universities and research institutes to develop new technologies. Transnational companies that have acquired various firms in different countries need to manage diverse R&D strategies and cultures. The new knowledge-based economy permeates across companies, universities, research institutes and countries, creating a cross-disciplinary, global environment. Clearly, managing technology in this new climate presents significant challenges.This book comprises selected papers from the 14th International Conference on Management of Technology, which was convened under the auspices of IAMOT and UNIDO on 22-26 May 2005 in Vienna, Austria. It deals with some important aspects of these challenges, and discusses in detail the changing dynamics of innovation and technology management. It will certainly appeal to academics, scientists, managers, and policy makers alike.

Effective project management tailored to the needs of the telecommunications industry "In our rapidly changing world, the information and communication technologies and services have an immense impact on virtually all aspects of our lives. . . . With his deep understanding of the telecommunication services, and his rich experiences in both standardization activities and teaching practice, [Dr. Sherif's] book provides a very clear analysis of development projects in telecommunication services. I believe the readers will find this book very useful and interesting." —Houlin Zhao, Director, Telecommunication Standardization Bureau,International Telecommunication Union "Dr. Sherif's book is an important contribution to the project management literature. With the domination of the service economy in recent years, the book addresses the unique features of telecommunication services, a critical pillar of the service sector. Development projects in telecommunications require combining good knowledge of the fundamentals of project management with clear understanding of the complexities arising from fast-changing technology, deregulations, standards, accountability, and supply chain management difficulties. This book addresses the much-needed integrative approach very well." —Tarek Khalil, President, International Association for Management of Technology (IAMOT) While there has been much written about project management, the vast majority of the literature focuses on industrial design and production. In Managing Projects in Telecommunication Services, Mostafa Hashem Sherif effectively demonstrates the unique requirements of projects in telecommunication services and, consequently, the benefits of an integrated approach to project management that is specifically tailored to the telecommunications industry. Managing Projects in Telecommunication Services draws from a wide range of disciplines, including organizational management, motivation, quality control, and software engineering. All the theory and practical guidance that an effective telecommunications project manager needs is provided. The text is divided into three main parts: Chapters 1 through 3 set forth the special characteristics of telecommunications projects, including technology life cycle, type of innovation, and project organization Chapters 4 through 10 cover the areas that the Project Management Institute has standardized in its publication A Guide to the Project Management Body of Knowledge (PMBOK® Guide), focusing on the issues specific to telecommunications. Chapters address scope, schedule and cost, information and communication, human resources, quality, vendor management, and risk Chapters 11 and 12 integrate and summarize all of the concepts for the planning and delivery of a project Chapters are loaded with examples and case studies, many from the author's personal experience, that demonstrate the benefits of good project management and the consequences of poor project management. Each chapter includes a summary of key points. References are also provided to facilitate further research and study. For project managers as well as students in telecommunications, this text is unsurpassed. It not only covers the theory and practice of effective project management, it also tailors its discussion specifically to the unique needs of the telecommunications industry. (PMBOK is a registered mark of the Project Management Institute, Inc.)

The theme of the 2002 Eleventh International Conference on Management of Technology, held in Miami Beach, Florida, was "The Drive Towards the Internet Economy: Opportunities and Challenges for Developed and Developing Regions of the World". The intent was to provide a special focus on the explosion expected in E-commerce.

Focusing on the questions that face top management, such as deciding which technologies to invest in and how to manage and exploit them, and shaping management roles to fit technological strategy. This text explores these and other key issues in an accessible, non-technical way.

The International Association for Management of Technology (IAMOT) is one of the largest scientific associations dealing with the education, research and application of management of technology. The annual conferences held by IAMOT assemble the most important scientists and experts in the field. The 16th conference held in 2007 included papers by experts from 32 countries. This book compiles the best of those papers presented at the conference. It covers topics and issues related to the knowledge economy, commercialization of knowledge, green technologies, and sustainable development.

Explains the purpose of a technology strategy and the need for its integration with other business policies
