Every chapter has been updated to reflect current thought and research in the field. Chapters devoted to specialized tests in neuropsychology have been updated to reflect new editions of these popular instruments. Special topic chapters have been added such as working in pediatric coma rehabilitation, using the planning, attention, sequential, simultaneous theory of neuropsychological processes, additions on ADHD, and more appear written by the leading experts and practitioners in these fields to reflect the demands of current practice in clinical child neuropsychology.

"Handbook for the Assessment of Driving Capacity was created as a practical resource for individuals involved in determining the driving capacity of cognitively compromised populations. The book discusses the cognitive demands of driving ability and how various disorders and/or traumas may impact abilities necessary to driving, and how best to assess whether those abilities have been affected and to what extent." "Contributors to this work include physicians, neuropsychologists, and occupational therapists in order to give a full view of perspectives in determining driving capacity. The book will serve the needs of neurologists, neuropsychologists, and rehabilitation specialists commonly working with persons whose driving ability needs assessment." --Book Jacket.

Life Care Planning is an advanced collaborative practice concerned with coordinating, accessing, evaluating, and monitoring necessary services for individuals with significant medical adversity. This handbook provides a comprehensive resource for all people involved with catastrophic impairments who need to solve complex medical care problems. Upda

This book offers clear best-practice guidelines for the assessment of Autism Spectrum Disorder. It discusses both the rising rates of autism and the growing need for appropriate, effective treatments and services. The book examines measures and methods used in assessing for core symptoms of ASD as well as memory, attention, visual and spatial skills, and other areas relevant to autism assessment. In-depth material on differential diagnosis and a range of comorbid conditions depict the complexities of the assessment process and the necessity of accurate identification. The book's case vignettes and sample recommendations add practical and personal dimensions to issues and challenges surrounding diagnosis. Topics featured include:

 A practical guide to the comprehensive assessment process. Discussion of the assessment process from referral to recommendation. Diagnostic framework for ASD and other disorders School-based ASD eligibility evaluation. Assessment across the lifespan. /divAssessment of Autism Spectrum Disorder is an important tool for clinicians, practitioners, researchers and graduate students in the fields of child and school psychology, behavioral therapy, and social work as well as the related areas of psychiatry, pediatrics, forensic psychology, and educational and healthcare policy.

Learn to confidently manage the growing number of stroke rehabilitation clients with Gillen's Stroke Rehabilitation: A Function-Based Approach, 4th Edition. Using a holistic and multidisciplinary approach, this text remains the only comprehensive, evidence-based stroke rehabilitation resource for occupational therapists. The new edition has been extensively updated with the latest information, along with more evidence-based research added to every chapter. As with previous editions, this comprehensive reference uses an application-based method that integrates background medical information, samples of functionally based evaluations, and current treatment techniques and intervention strategies. Evidence-based clinical trials and outcome studies clearly outline the basis for stroke interventions. UNIQUE! Survivor's Perspectives help readers understand the stroke rehabilitation process from the client'' point-of-view. UNIQUE! Case studies challenge readers to apply rehabilitation concepts to realistic scenarios. UNIQUE! A multidisciplinary approach highlights discipline-specific distinctions in stroke rehabilitation among occupation and physical therapists, physicians, and speech-language pathologists. Review questions in each chapter help readers assess their understanding of rehabilitation concepts. Key terms and chapter objectives at the beginning of each chapter help readers study more efficiently. Three new chapters broaden your understanding of stroke intervention in the areas of Using Technology to Improve Limb Function, Managing Speech and

Language Deficits after Stroke, and Parenting after Stroke. Learning activities and interactive references on a companion Evolve Resources website help you review textbook content and locate additional information.
