Artificial Intelligence in no time Who This Book Is For This book is for Python developers who want to build real-world Artificial Intelligence applications. This book is friendly to Python beginners, but being familiar with Python would be useful to play around with the code. It will also be useful for experienced Python programmers who are looking to use Artificial Intelligence techniques in their existing technology stacks. What You Will Learn Realize different classification and regression techniques Understand the concept of clustering and how to use it to automatically segment data See how to build an intelligent recommender system Understand logic programming and how to use it Build automatic speech recognition systems Understand the basics of heuristic search and genetic programming Develop games using Artificial Intelligence Learn how reinforcement learning works Discover how to build intelligent applications centered on images, text, and time series data See how to use deep learning algorithms and build applications based on it In Detail Artificial Intelligence is becoming increasingly relevant in the modern world where everything is driven by technology and data. It is used extensively across many fields such as search engines, image recognition, robotics, finance, and so on. We will explore various real-world scenarios in this book and you'll learn about various algorithms that can be used to build Artificial Intelligence applications. During the course of this book, you will find out how to make informed decisions about what algorithms to use in a given context. Starting from the basics of Artificial Intelligence, you will learn how to develop various building blocks using different data mining techniques. You will see how to implement different algorithms to get the best possible results, and will understand how to apply them to real-world scenarios. If you want to add an intelligence layer to any application that's based on images, text, stock market, or some other form of data, this exciting book on Artificial Intelligence will definitely be your guide! Style and approach This highly practical book will show you how to implement Artificial Intelligence. The book provides multiple examples enabling you to create smart applications to meet the needs of your organization. In every chapter, we explain an algorithm, implement it, and then build a smart application.

This book presents nearly 90 carefully selected contributions at the 12th International Conference Mechatronics, which took place in Brno, Czech Republic on 6 – 8 September 2017. Reflecting the most progressive and constantly changing areas of mechatronics, these proceedings includes papers concerning modeling and simulation, automatic control, robotics, sensors and actuators, electrical machines, and energy harvesting. It not only offers inspiration, but also deepens readers ' interdisciplinary and integrated understanding of modern engineering. The book is intended for experts in the integration of electronic, mechanical, control and computer sciences.

International conference on Advanced Materials and Manufacturing Processes (ICAMMP 18) Selected, peer reviewed papers from the International Conference on Advanced Materials and Manufacturing Processes (ICAMMP 2018), March 30 - 31, 2018, Vizianagaram, India

This book examines the increasing marginalization of and response by people living in urban areas throughout the Western Hemisphere, and both the local and global implications of continued colonial racial hierarchies and the often-dire consequences they have for people perceived as different. However, in the aftermath of recent U.S. elections, whiteness also seems to embody strictures on religion, ethnicity, country of origin, and almost any other personal characteristic deemed suspect at the moment. For that reason, gender, race, and even class, collectively, may not be sufficient units of analysis to study the marginalizing mechanisms of the urban center. The authors interrogate the social and institutional structures that facilitate the disenfranchisement or downward trajectory of groups, and their potential or subsequent lack of access to mainstream rewards. The book also seeks to highlight examples where marginalized groups have found ways to assert their equality. No recent texts have attempted to connect the mechanisms of marginality across geographical and political boundaries within the Western Hemisphere.

"Dramatic shifts in the demographic and labor diversity of American faculty have pressed institutions and the profession to clarify who the 'real' faculty are. Emblematic of this struggle, full-time, non-tenure tract faculty are often caught in between the world of tenured faculty, where they fulfill many of the same roles, and that of adjunct faculty, with whom they experience similar employment insecurity and minimal institutional support. Efforts to equalize respect, resources, and treatment, although laudable, may be missing a vital aspect of the conversation: the role of collegiality and the collegium. Collegiality, the cultural, structural, and behavioral components, and the collegium, or the shared identity collegiality serves, are ancient concepts that in contemporary contexts often receive more regard than clarity. The intersection of these conceptual and practical challenges raises timely questions for the faculty profession. What is it about the history of the professoriate in America that has rendered the collegium inadequate and yet so important in an age of differentiated labor? How might a renewed vision for collegiality bring clarity to the question of which faculty should be regarded as experts? How can we adapt and leverage these important concepts for a professoriate that is increasingly diverse by demographics and employment category in ways that result in a more inclusive and robust profession? Engaging in these questions through the extant literature will call faculty, administrators, and graduate students into a compelling new conversation about the needs of and possibilities for the professoriate"--Back cover.
