The Nutrition and Health series of books has as an overriding mission to provide health professionals with texts that are considered essential because each includes: a synthesis of the state of the science; timely, in-depth reviews by the leading researchers in their respective fields; extensive, up-to-date fully annotated reference lists; a detailed index; relevant tables and figures; identification of paradigm shifts and the consequences; of information between chapters, but targeted, inter-chapter refer virtually no overlap rals, suggestions of areas for future research; and balanced, data-driven answers to patient questions that are based on the totality of evidence rather than the findings of any single study. The series volumes are not the outcome of a symposium. Rather, each editor has the potential to examine a chosen area with a broad perspective, both in subject matter as well as in the choice of chapter authors. The international perspective, especially with regard to public health initiatives, is emphasized where appropriate. The editors, whose training is both research and practice oriented, have the opportunity to develop a primary objective for their book, define the scope and focus, and then invite the leading authori ties from around the world to be part of their initiative. The authors are encouraged to provide an overview of the field, discuss their own research, and relate the research de findings to potential human health consequences.

"There is an apocryphal story of an eminent neurology professor who was asked to provide a differential diagnosis. He allegedly quipped: "I can't give you a differential diagnosis. If you wish I will give you a list of wrong diagnoses followed by the right diagnosis." Sadly, this sort of arrogance pervaded our field, particularly in the era before there were accurate diagnostic methods and effective treatments of neurological diseases. Fortunately, this sort of pomposity is now relegated to the past and remains only as an antique reminder of a type of hubris that precluded discovery and progress in diseases of the nervous system"--

A brief, clear, thorough, and highly enjoyable approach to clinical microbiology, brimming with mnemonics, humor, summary charts and illustrations, from AIDS to "flesh-eating bacteria" to ebola, mad cow disease, hantavirus, anthrax, smallpox, botulism, etc. Excellent Board review.

Drawing from the Aboriginal Healing Foundation's three-volume series Truth and Reconciliation;which comprises the titles From Truth to Reconciliation; Response, Responsibility, and Renewal; and Cultivating Canada;aclaimed veteran broadcast-journalist and host of The Next Chapter on CBC Radio Shelagh Rogers joins series editors Mike DeGagné and Jonathan Dewar to present these selected reflections, in reader format, on the lived and living experiences and legacies of Residential Schools and, more broadly, reconciliation in Canada.

Delivers the foundational and practical knowledge required for pharmacists to become an integral part of the veterinary health care team, improving therapeutic outcome while preventing serious adverse drug reactions in veterinary patients Pharmacotherapeutics for Veterinary Dispensing enables pharmacists and pharmacy students to expand the breadth of their pharmacological knowledge to include common veterinary species. The book offers a practical yet complete resource for dispensing drugs for canine and feline patients, with additional chapters on horses, birds, reptiles, small mammals, and food animals. Edited by a globally recognized expert in veterinary pharmacology, and including chapters written by veterinarians with expertise in pharmacotherapy and pharmacists with expertise in veterinary medicine, this book is designed to help pharmacists enhance the quality of veterinary patient care. This book is the first to combine the expertise of both veterinarians and pharmacists to enable pharmacists to apply their knowledge and skills to assure optimal therapeutic outcomes for patients of all species. Pharmacotherapeutics for Veterinary Dispensing: Puts the information needed to safely dispense prescription and OTC drugs for veterinary patients at the pharmacists' fingertips Focuses on crucial details of canine and feline pharmacotherapeutics Helps pharmacists avoid adverse drug reactions including pharmacogenomic and breed-related drug sensitivities Offers an authoritative resource written by leading veterinary pharmacy experts designed to integrate pharmacists into the veterinary healthcare team Includes crucial regulatory information unique to veterinary drug dispensing and compounding Pharmacotherapeutics for Veterinary Dispensing is an essential reference for all pharmacists and pharmacy students that might find themselves dispensing drugs to veterinary patients, as well as for veterinarians and others involved with dispensing veterinary drugs.

Provides effective diagnosis and management of infectious diseases in pregnant women in a single comprehensive available resource for busy clinicians.

The Yearbook compiles the most recent developments in experimental and clinical research and practice in one comprehensive reference book. The chapters are written by well recognized experts in the field of intensive care and emergency medicine. It is addressed to everyone involved in internal medicine, anesthesia, surgery, pediatrics, intensive care and emergency medicine.

Individual essays address issues raised by the science, politics, and history of race, evolution, and identity; genetically modified organisms and genetic diseases; gene work and ethics; and the boundary between humans and animals. The result is an entree to the complicated nexus of questions prompted by the power and importance of genetics and genetic thinking, and the dynamic connections linking culture, biology, nature, and technoscience. The volume offers critical perspectives on science and culture, with contributions that span disciplinary divisions and arguments grounded in both biological perspectives and cultural analysis.

Improved conditions of care for premature infants have led to markedly increased survival rates over the last few decades, particularly in very low and extremely low birth weight infants. Nutritional measures play a central role in the long-term outcome, health and quality of life of these premature infants. In this publication, leading experts from all 5 continents present the most recent evidence and critical analyses of nutrient requirements and the practice of nutritional care (with the focus on very low birth weight infants) to provide guidance for clinical application. After the introductory chapters, covering nutritional needs and research evidence in a more general manner, topics such as amino acids and proteins, lipids, microminerals and vitamins, parenteral and enteral nutrition as well as approaches to various disease conditions are addressed. Due to its focus on critical appraisals and recommendations, this book is of interest not only for the researcher who wants to keep up to date, but also for the clinician faced with premature infants in his practice.

Games User Research' is the definitive guide to methods and practices for games user professionals, researchers and students seeking additional expertise or starting advice in the game development industry.
