Another resource that formed the part of the methodology used for qualitative analysis of the research question is the NASA report on world forest cover (NASA, 2001). The organization provides a quantitative satellite imagery report that shows consistency in deforestation trend over the past two decades. Therefore, due to the vastness of the forests of the world and impenetrability of most tropical rain forest, it was necessary to choose these methods to gather the required data for analysis.

Types of economic deforestation models. Household and firm-level models. Regional-level models. National and macro-level models. Priority areas for future research.

Restoration forestry or eco-forestry or sustainable forestry is basically not aimed to produce forest trees for logging or any sort of human consumption instead it mainly aiming the environmental protection in order to maintain Carbon dioxide and Oxygen levels as well as pacifying weather changes and the effects to the natural habitats. This book attempts to justify the reasons of deforestation, afforestation and reforestation with available examples and current techniques as per discussions of Clean Development Mechanism (CDM) and Land use, land use, change and forestry (LULUCF) of Kyoto protocol. Book also sporadically justifies forest restoration programme of International Tropical Timber Organization (ITTO) and related international treaties on forest ecosystem.

The only quantitative deforestation study to focus on one country, this case analysis of the Philippines since 1946 yields more concrete data than previous cross-national studies. David Kummer's close examination of the interactions among political, economic, and cultural factors and their environmental consequences sheds light on similar situations in other countries.

The Fifth Edition of the award-winning Environmental Communication and the Public Sphere is the first comprehensive introduction to the growing field of environmental communication. This groundbreaking book focuses on the role that human communication plays in influencing the ways we perceive the environment. It also examines how we define what constitutes an environmental problem and how we decide what actions to take concerning the natural world. The updated and revised Fifth Edition includes recent developments, such as water protectors and the Dakota Access Pipeline, the Flint Water Crisis, and the March for Science, along with the latest research and developments in environmental communication.

What do we know about deforestation?. The direct and underlying causes of deforestation and degradation. Policy options for reducing deforestation and degradation. Implications for policies and further research to support REDD.

Deforestation rates in the Congo Basin are among the lowest in the tropical rainforest belt and are significantly below rates in most other African regions. Local and regional development, population increases and global demand for commodities are likely to increase deforestation and forest degradation in the Congo Basin.

Tropical forests are an undervalued asset in meeting the greatest global challenges of our time—averting climate change and promoting development. Despite their importance, tropical forests and their ecosystems are being destroyed at a high and even increasing rate in most forest-rich countries. The good news is that the science, economics, and politics are aligned to support a major international effort over the next five years to reverse tropical deforestation. *Why Forests? Why Now?* synthesizes the latest evidence on the importance of tropical forests in a way that is accessible to anyone interested in climate change and development and to readers already familiar with the problem of deforestation. It makes the case to decisionmakers in rich countries that rewarding developing countries for protecting their forests is urgent, affordable, and achievable.

The report offers a simple framework for policy analysis by identifying three forest types: frontiers and disputed lands; lands beyond the agricultural frontier; and, mosaic lands where forests and agriculture coexist. It collates geographic and economic information for each type that will help formulate poverty-reducing forest policy.
