Sensemaking is the process by which we gain wisdom through examining cultural knowledge. It's a kind of cultural engagement closely associated with the humanities. For example, it might seem normal today to look to numbers for meaning, but sensemaking allows us to go further than sales figures, turnover rates and the like.

Read Book Sensemaking What Makes Human

A Financial Times "Business Book of the Month" Based on his work at some of the world's largest companies, including Ford, Adidas, and Chanel, Christian Madsbjerg's Sensemaking is a provocative stand against the tyranny of big data and scientism, and an urgent, overdue defense of human intelligence. Humans have become subservient to algorithms. Every day brings a new Moneyball fix--a math whiz who will crack open an industry with clean fact-based analysis rather than human intuition and experience. As a result, we have stopped thinking. Machines do it for us. Christian Madsbjerg argues that our fixation with data often masks stunning deficiencies, and the risks for humankind are enormous. Blind devotion to number crunching imperils our businesses, our educations, our governments, and our life savings. Too many companies have lost touch with the

Intelligence Essential In
The Age Of The Algorithm

humanity of their customers, while marginalizing workers with liberal arts-based skills. Contrary to popular thinking, Madsbjerg shows how many of today's biggest success stories stem not from "quant" thinking but from deep, nuanced engagement with culture, language, and history. He calls his method sensemaking. In this landmark book, Madsbjerg lays out five principles for how business leaders, entrepreneurs, and individuals can use it to solve their thorniest problems. He profiles companies using sensemaking to connect with new customers, and takes readers inside the work process of sensemaking "connoisseurs" like investor George Soros, architect Bjarke Ingels, and others. Both practical and philosophical, Sensemaking is a powerful rejoinder to corporate groupthink and an indispensable resource for leaders and innovators who want to stand out from the pack.

On the Move er en interessant og rettidig bog om relevansen af Nordisk Ledelse i en evigt forandrende, hastigt bevægende og intens forretningsverden. Bogen beskriver, hvad Nordisk Ledelse er og hvordan denne ledelsesform kan inspirere og implementeres også i andre dele af verden. Gennem interviews med mere end 50 udenlands bosatte, men nordisk fødte ledere, fortæller forfatteren Pernille Hippe Brun, Strategisk rådgiver indenfor ledelse og organisationskultur, historien om de udfordringer, sejre og faldgruber man kan opleve, når man drager udenlands for at lede under fremmede himmelstrøg. Bogen er fyldt med gode råd, personlige anekdoter og indsigter fra moderne ledelsesteori samt veletablerede nordiske praksis-eksempler på, hvordan en nordisk ledelsesstil kan implementeres, tilpasses og justeres, således at den kan komme

internationalt til gavn og inspirere morgendagens ledere - hvad end de er af nordisk ophav eller ej. Pernille Hippe Brun er strategisk ledelses- og organisationskonsulent med erfaring fra opbygning og ledelse af egen konsulentvirksomhed samt mange års rådgivning af ledere fra både det nordiske kontinent samt USA, Kenya og Kina. Udover konsulentarbejde har Pernille været med til at opbygge og drive en E-MBA i Kenya i samarbejde med Copenhagen Business School. Pernille er forfatter til tre bøger - bl.a. bogen Strengths Based Leadership Handbook. Pernilles primære arbejdsplads er i dag den globale virksomhed Tradeshift, hvor hun agerer som strategisk rådgiver indenfor kultur, ledelse og læring.

Businesses need a new type of problem

Read Book Sensemaking What Makes Human

solving. Why? Because they are getting people wrong. Traditional problem-solving methods taught in business schools serve us well for some of the everyday challenges of business, but they tend to be ineffective with problems involving a high degree of uncertainty. Why? Because, more often than not, these tools are based on a flawed model of human behavior. And that flawed model is the invisible scaffolding that supports our surveys, our focus groups, our R&D, and much of our long-term strategic planning. In *The Moment of Clarity*, Christian Madsbjerg and Mikkel Rasmussen examine the business world's assumptions about human behavior and show how these assumptions can lead businesses off track. But the authors chart a way forward. Using theories and tools from the human sciences—anthropology, sociology, philosophy, and psychology—*The Moment*

Read Book Sensemaking What Makes Human

of Clarity introduces a practical framework called sensemaking. Sensemaking's nonlinear problem-solving approach gives executives a better way to understand business challenges involving shifts in human behavior. This new methodology, a fundamentally different way to think about strategy, is already taking off in Fortune 100 companies around the world. Through compelling case studies and their direct experience with LEGO, Samsung, Adidas, Coloplast, and Intel, Madsbjerg and Rasmussen will show you how to solve problems as diverse as setting company direction, driving growth, improving sales models, understanding the real culture of your organization, and finding your way in new markets. Over and over again, executives say the same thing after engaging in a process of sensemaking: "Now I see it . . ." This experience—the moment of clarity—has

"This handbook surveys the materials, approaches, contexts, and applications of American folklore and folklife studies to guide students and scholars of American folklore, culture, history, and society in the future. In addition to longstanding areas in the 350-year legacy of the subject's study and applications such as folktales and speech, the handbook includes exciting fields that have emerged in the twenty-first century such as the Internet, bodylore, folklore of organizations and networks, sexual orientation, neurodiverse identities, and disability groups. These studies encompass cultural traditions in the United

States ranging from bits of slang in private conversations to massive public demonstrations, ancient beliefs to contemporary viral memes, and a simple handshake greeting to festivals encompassing multiple genres and groups. Folklore and folklife studies include material traditions such as buildings and crafts as well as oral and social genres of dance, ritual, drama, and play. Whereas the use of lore often emphasizes speech, song, and story that all people express, the rhetoric of life draws attention to tradition-centered communities such as the Amish and Hasidim, occupational groups and their workaday worlds, and children and other age groups. Significant to the American context has been the cultural diversity and changing national boundaries of the United States, relative youth of the nation and its legacy of mass immigration, mobility of residents and their relation to

an indigenous and racialized population, and a varied landscape and settlement pattern. The handbook is a reference, therefore, to American studies as well as the global study of tradition, folk arts, and cultural practice"--

This cutting edge book considers how advances in technologies and new media have transformed our perception of education, and focuses on the impact of the privatisation of digital tools as a mean of knowledge production. Arguing that education needs to adapt to the modern learner, the book's unique approach is based on a disassociation with the deeply ingrained attitude with which people have traditionally viewed education - learning the existing symbolic systems of certain disciplines and then expressing themselves strictly within the operational modes of these systems. The ways of knowledge

production – exploring, recording, representing, making meaning of and sharing human experiences – have been fundamentally transformed through the infusion of digital technologies into all aspects of human activity, allowing learners to engage with their immediate natural, social and cultural environments by capitalising on their individual abilities and interests. This book proposes a new approach to teaching and learning termed ‘cinematic bricolage’, which involves generating knowledge from heterogeneous resources in a ‘do-it-yourself’ manner while making meaning through multimodal representations. It shows how cinematic bricolage reconnects ways of knowing with ways of being, empowering the individual with a sense of personal identity and responsibility, helping to shape more aware social citizens.

Read Book Sensemaking What Makes Human

The author explores the centrality of Human Intelligence (HUMINT) in meeting the needs of the U.S. Army, the Department of Defense, and the whole of government. Such intelligence is essential to create a national security strategy, to define whole of government policies, to acquire the right capabilities at the right price in time to be useful, and to conduct local and global operations. He outlines 15 distinct types of HUMINT, four of which are classified (defensive and offensive counterintelligence, clandestine operations, and covert action), with the other 11 being predominantly unclassified. The author offers the U.S. Army an orientation to a world in which thinkers displace shooters as the center of gravity for planning, programming, and budgeting, as well as the proper structuring of mission mandates, force structures, and tactics and techniques to be

used in any given mission area.--

The Age Of The Algorithm

Where is the academic study of music today, and what paths should it take into the future? Should we be looking at how music relates to society and constructs meaning through it, rather than how it transcends the social? Can we "remix" our discipline and attempt to address all musics on an equal basis, without splitting ourselves in advance into subgroups of "musicologists", "theorists", and "ethnomusicologists"? These are some of the crucial issues that Nicholas Cook has raised since he emerged in the 1990s as one of the UK's leading and most widely read voices in critical musicology. In this book, collaborators and former students of Cook pursue these questions and others raised by his work—from notation, historiography, and performance to the place of music in multimedia forms such

resource for students and researchers in education, sociology, politics and other related fields across the humanities and social science disciplines.

The teaching of organization theory and the conduct of organizational research have been dominated by a focus on decision-making and the concept of strategic rationality. However, the rational model ignores the inherent complexity and ambiguity of real-world organizations and their environments. In this landmark volume, Karl E Weick highlights how the 'sensemaking' process shapes organizational structure and behaviour. The process is seen as the creation of reality as an ongoing accomplishment that takes form when people make retrospective sense of the situations in which they find themselves.
