Sicily, with its abundant presence of historical waterworks, served as background for the 10th international conference on the history of water management and hydraulic engineering in the

Download Free Sicilia

Mediterranean region in May 1998. The conference addressed five themes as a basis for discussion and as a stimulus for new debate and for finding new directions for research. The first topic dealt with the

Download Free Sicilia

conditions imposed by nature, their influence upon human behaviour and, consequently, the development of water management. The tangible results of human responses to these parameters set by

Download Free Sicilia

nature were the subject of the second and third theme respectively, that is to say, on the building of aqueducts and the water management of Roman baths. Themes four and five went beyond a mere examination of

Download Free Sicilia

the archaeological realia:
they dealt with the
questions whether there was
a water shortage or a water
surplus in Roman cities and
whether the Romans had a
hygienic lifestyle. These
issues were tabled in order

Download Free Sicilia

to improve our understanding of the context of ancient water management. These proceedings contain the papers given at the conference, many of them presenting cases from Sicily. There are

Download Free Sicilia

contributions by
archaeologists, historians,
geologists, hydraulic
engineers and urban
historians, all specialists
in the field of historical
water research. The volume
is richly illustrated.
