Andrew Yang, the founder of Venture for America, offers a unique solution to our country's economic and social problems—our smart people should be building things. Smart People Should Build Things offers a stark picture of the current culture and a revolutionary model that will redirect a generation of ambitious young people to the critical job of innovating and building new businesses. As the Founder and CEO of Venture for America, Andrew Yang places top college graduates in start-ups for two years in emerging U.S. cities to generate job growth and train the next generation of entrepreneurs. He knows firsthand how our current view of education is broken. Many college graduates aspire to finance, consulting, law school, grad school, or medical school out of a vague desire for additional status and progress rather than from a genuine passion or fit. In Smart People Should Build Things, this self-described “recovering lawyer” and entrepreneur weaves together a compelling narrative of success stories (including his own), offering observations about the flow of talent in the United States and explanations of why current trends are leading to economic distress and cultural decline. He also presents recommendations for both policy makers and job seekers to make entrepreneurship more realistic and achievable.

We've got a problem—our most talented and educated young people aren't building things. They're not starting or joining innovative companies that are addressing crises in education, energy, or transportation. Meanwhile, in recovering cities such as Detroit, New Orleans, and Baltimore, promising startups and growth companies representing the next generation of job creation are desperate to attract the talent they need to expand and thrive. Imagine if the same people who are currently heading to Wall Street were instead joining startups and early-stage companies throughout the United States. How long would it take before they positively impacted job creation and economic competitiveness? Knowing firsthand why the current vision of education and career paths isn't functioning properly, Andrew Yang has set out to fix this problem. As the founder and CEO of Venture for America, he places top college graduates in startups for two years in emerging U.S. cities to generate job growth and train a new generation of entrepreneurs. In Smart People Should Build Things, this self-described

"recovering lawyer" and entrepreneur has woven together a compelling narrative of success stories (including his own), offering observations about the flow of talent in the United States, and explaining why current trends are leading to economic distress and cultural decline. He also presents recommendations for both policy makers and job seekers that will make entrepreneurship more realistic and attainable. The country needs teams of committed builders to create value and restore the culture, and Smart People Should Build Things is about how we can get there.

From 2020 Democratic presidential candidate Andrew Yang, a captivating account of how "a skinny Asian kid from upstate" became a successful entrepreneur, only to find a new mission: calling attention to the urgent steps America must take, including Universal Basic Income, to stabilize our economy amid rapid technological change and automation. The shift toward automation is about to create a tsunami of unemployment. Not in the distant future--now. One recent estimate predicts 45 million American workers will lose their jobs within the next twelve years--jobs that won't be replaced. In a future marked by restlessness and chronic unemployment, what will happen to American society? In *The War on Normal People*, Andrew Yang paints a dire portrait of the American economy. Rapidly advancing technologies like artificial intelligence, robotics and automation software are making millions of Americans' livelihoods irrelevant. The consequences of these trends are already being felt across our communities in the form of political unrest, drug use, and other social ills. The future looks dire-but is it unavoidable? In *The War on Normal People*, Yang imagines a different future--one in which having a job is distinct from the capacity to prosper and seek fulfillment. At this vision's core is Universal Basic Income, the concept of providing all citizens with a guaranteed income--and one that is rapidly gaining popularity among forward-thinking politicians and economists. Yang proposes that UBI is an essential step toward a new, more durable kind of economy, one he calls "human capitalism."

Written with a fresh voice and a dash of humor, *Do Good Well* is an exciting and readily adaptable guide to social innovation that not only captures the entrepreneurial and creative spirit of our time, but also harnesses the insights, wisdom, and down-to-earth experience of today's most accomplished young leaders. *Do Good Well* offers a winning combination of theory, anecdote, and application, giving you the framework you need to make an impact next door or across the world. The authors present a 12-step process that empowers readers to act on their passions and concerns. This process is organized into three parts: *Do What Works*, *Work Together*, and *Make It Last*. They offer specific guidance for following the process through practical and prescriptive actions such as building organizations, joining boards, applying for funding, creating partnerships with organizations that have similar goals, organizing conferences, and publicizing events. The book incorporates accounts of young people in action, and always reinforces the message that social innovation can be a lifestyle, made up of efforts small and large. It is not an all-or nothing proposition, and anyone can affect social change.

Dear Reader. It started out as a way to release my emotions on paper. To make sense of the darkness. To alleviate the impact it was having on my mental health. This is not a book about sympathy. This is not a book about pity. Nor is it a book out to seek attention. This is a book documenting my most recent dark experience, chronologically ordered, as I try to find purpose in life. It's a book that stays true to what I was feeling in the moment as I navigated my own darkness. To me, it was therapy. For you, I hope it gives you comfort and solace in relatability.

For those who want to improve the quality and sophistication of their speech and writing, this is the book to keep on the nightstand.

"Most books on entrepreneurship focus on strategic issues like product/market fit, deciding what market to be in, or what business to buy,

how to get traction with customers, etc. Examples include bestselling perennials such as *The Lean Startup*, *Art of the Start*, *Zero to One*, *Startup Owner's Manual*, et al *Simple Startup*, covers a completely different part of the process: the concrete details of business launch, growth, and management. Most best-sellers that promise to tell people how to start a business do so very briefly, and quickly end up recommending that readers seek guidance from lawyers, accountants, and other paid advisors. *Simple Startup* gives readers the detailed insights they need to understand exactly what they need from each of these professional counselors, to ask the smart questions that will help them get their money's worth, and to make intelligent decisions independent of their advisors' recommendations. *Simple Startup* is aimed at those who want to make it really big, not just the home-based artisans, daycare providers, or dry cleaning stores. These are innovators and visionaries who have the passion, drive, and creativity to launch a great company, but who need a nuts-and-bolts guide to the hundreds of complex challenges that derail many a business on the journey from their first business card to a successful company sale or IPO"--

It's become an article of faith that American entrepreneurship is in trouble. The problems are many: lack of capital, too few entrepreneurial immigrants, excessive regulation, an aging population, slowing population growth, and rising student debt. But while experts across the country debate the causes and propose solutions, Scott Shane explains that the data just do not fit. Dismantling each of the most widely accepted theories in turn, he persuasively demonstrates that—while an evolving market is changing the nature of most startups—entrepreneurship is actually alive and well. Shane reveals how the number of incorporated startups is rising, fewer startups are failing, and the number of businesses backed by investors is increasing. The overall picture is positive. Exhaustively researched and compellingly told, this book will be read and discussed for years to come.
