Higher education leaders today recognize the need to develop an international strategy for their institutions but may lack the knowledge and perspective

"This is a beautifully written book that takes the reader to the heart of ethnography as experience. Readers can walk in the shoes of ethnographers who have travelled before them, and learn as they learned. Sara Delamont is an undisputed expert in both ethnography and education, and here illustrates she is also a tour de force in writing style. All the important ingredients for a recipe to make a good quality ethnography are here, and they are served up with relish!" - Karen O ' Reilly, Loughborough University "This is a powerful, richly nuanced, evocative work; a stunning and brilliantly innovative intervention. It provides ground zero - the starting place for the next generation of social scholars of education. A major accomplishment." - Norman K. Denzin, University of Illinois at Urbana-Champaign The ethnography of education has been conducted by sociologists and anthropologists, largely in self-contained and self-referential ways. This book celebrates the continuities and the strengths of ethnographic research on education in formal and non-formal settings, deliberately transgressing the sociology/anthropology divide. Education is broadly defined to cover many settings other than schools, in many countries, for many age-groups. The book is structured thematically, including chapters on movement and mobilities, memorials and memories, time and timescapes, bodies, and performativities, multi-sensory research, and narratives. Strategies for designing innovative ethnographic projects, and for fighting familiarity are provided.

Exploring South Dakota through Project-Based Leaning includes 50 well-thought-out projects designed for grades 3-5. In assigning your students projects that dig into South Dakota's geography, history, government, economy, current events, and famous people, you will deepen their appreciation and understanding of South Dakota while simultaneously improving their analytical skills and ability to recognize patterns and big-picture themes. Project-based learning today is much different than the craft-heavy classroom activities popular in the past. Inquiry, planning, research, collaboration, and analysis are key components of project-based learning activities today. However, that doesn't mean creativity, individual expression, and fun are out. They definitely aren't! Each project is designed to help students gain important knowledge and skills that are derived from standards and key concepts at the heart of academic subject areas. Students are asked to analyze and solve problems, to gather and interpret data, to develop and evaluate solutions, to support their answers with evidence, to think critically in a sustained way, and to use their newfound knowledge to formulate new questions worthy of exploring. While some projects are more complex and take longer than others, they all are set up in the same structure. Each begins with the central project-driving questions, proceeds through research and supportive questions, has the student choose a presentation option, and ends with a broader-view inquiry. Rubrics for reflection and assessments are included, too. This consistent framework will make it easier for you assign projects and for your students to follow along and consistently meet expectations. Encourage your students to take charge of their projects as much as possible. As a teacher, you can act as a facilitator and guide. The projects are structured such that students can often work through the process on their own or through cooperation with their classmates.
