Defines Black English in the context of African-American culture and lifestyles and tackles the issue of white attitudes toward Black English

By 1970, more than 60 "Pan African nationalist" schools, from preschools to post-secondary ventures, had appeared in urban settings across the United States. The small, independent enterprises were often accused of teaching hate and were routinely harassed by authorities. Yet these institutions served as critical mechanisms for transmitting black consciousness. Founded by activist-intellectuals, the schools strove not simply to bolster the academic skills and self-esteem of inner-city African-American youth but also to decolonize minds and embody the principles of self-determination and African identity. In *We Are An African People*, historian Russell Rickford traces the brief lives of these autonomous black institutions created to claim some of the self-determination that the integrationist civil rights movement had failed to provide. Influenced by Third World theorists and anticolonial movements, organizers of the schools saw formal education as a means of creating a vanguard of young activists devoted to the struggle for black political sovereignty throughout the world. Most of the schools were short-lived, but their stories have much to tell us about Pan Africanism as a social and intellectual movement and as a key part of an indigenous black nationalism. A former journalist, Rickford uses a virtually unknown movement to explore black nationhood and a particularly fertile period of political, cultural, and social revitalization that envisioned an alternate society.

When the Oakland, California, school board called African American English "Ebonics" and claimed that it "is not a black dialect or any dialect of English," they reignited a debate over language, race, and culture that reaches back to the era of slavery in the United States. In this book, John Baugh, an authority on African American English, sets new parameters for the debate by dissecting and challenging many of the prevailing myths about African American language and its place in American society. Baugh's inquiry ranges from the origins of African American English among slaves and their descendants to its recent adoption by standard English speakers of various races. Some of the topics he considers include practices and malpractices for educating language minority students, linguistic discrimination in the administration of justice, cross-cultural communication between Blacks and whites, and specific linguistic aspects of African American English. This detailed overview of the main points of debate about African American language will be important reading for both scholars and the concerned public.

In response to the flood of interest in African American Vernacular English (AAVE) following the recent controversy over "Ebonics," this book brings together sixteen essays on the subject by a leading expert in the field, one who has been researching and writing on it for a quarter of a century.
