René Descartes and the Fly on the Ceiling The coordinate system we commonly use is called the Cartesian system, after the French mathematician René Descartes (1596-1650), who developed it in the 17th century. Legend has it that Descartes, who liked to stay in bed until late, was watching a fly on the ceiling from his bed.

A very famous mathematician called Rene Descartes lay in bed one night. As he lay there, he looked up at the ceiling in his bedroom. He noticed a fly was asleep on the ceiling. Descartes, being a mathematician wondered if he could figure out a way of stating where exactly the fly was on the ceiling.

The spider is 1 foot below the ceiling and horizontally centred on one 12'x12' wall. The fly is 1 foot above the floor and horizontally centred on the opposite wall. The problem is to find the minimum distance the spider must crawl along the walls, ceiling and/or floor to reach the fly, which remains stationary.

When the fly arrives at the middle (height) of the box, it is the same for the spider to go over the top or over the bottom of the box. When the fly goes still further to the bottom, the spider should go on the bottom of the box. However in some cases it is quicker to go via the side wall instead of either the floor or the ceiling.

A story about how the very messy French philosopher, René Descartes, invented an ingenious way to keep track of his possessions.

Winner of the National Outdoor Book Award for Natural History "After reading Super Fly, you will never take a fly for granted again. Thank you, Jonathan Balcombe, for reminding us of the infinite marvels of everyday creatures." –Sy Montgomery, Author of How to Be a Good Creature From an expert in animal consciousness, a book that will turn the fly on the wall into the elephant in the room. For most of us, the only thing we know about flies is that they're annoying, and our usual reaction is to try to kill them. In Super Fly, the myth-busting biologist Jonathan Balcombe shows the order Diptera in all of its diversity, illustrating the essential role that flies play in every ecosystem in the world as pollinators, waste-disposers, predators, and food source; and how flies continue to reshape our understanding of evolution. Along the way, he reintroduces us to familiar foes like the fruit fly and mosquito, and gives us the chance to meet their lesser-known cousins like the Petroleum Fly (the only animal in the world that breeds in crude oil) and the Chocolate Midge (the sole pollinator of the Cacao tree). No matter your outlook on our tiny buzzing neighbors, Super Fly will change the way you look at flies forever. Jonathan Balcombe is the author of four books on animal sentience, including the New York Times bestselling What A Fish Knows, which was nominated for the PEN/E.O. Wilson Award for Science Writing. He has worked for years as a researcher and educator with the Humane society to show us the consciousness of other creatures, and here he takes us to the farthest reaches of the animal kingdom.

Retired corporate pilot, Nina Anderson not only tells her story but worked in collaboration with several other women pilots who forged new territory in the 1970s and 1980s by being the first hired by their airline or their corporate flight department. In a time when women were mostly excluded from executive positions, including the front office of a jet, these woman persevered. Their stories give inspiration to anyone who has the qualifications to achieve their career goal but finds the door closed for any number of reasons. In her book, Flying Above the Glass Ceiling she takes us through the accomplishments of women flyers from the 1800s right through present day, noting their specific struggles of entering a man's occupation and giving insight into what it was that kept them moving toward their dream. Giving us a glimpse of their personal stories, their triumphs and disappointments, we are taught lessons that can apply to anyone persuing their chosen career. Information presented is not limited to women aviators but encompasses many of the occupations that make up the category, aviation - mechanics, dispatchers, flight attendants, aircraft brokers, engineers. Tips from successful aviation related business owners help the reader to get a glimpse of how they can deal with discrimination, relationships, competition and a sexist attitude. This book is an entertaining read, but more than that reveals the determination and passion of these women who all rose to success in the face of many obstacle

A look into the life of a fly who does not quite understand why no one likes him.

Discusses the fly's anatomy, its ability to walk on the ceiling, and its disgusting food tastes.

Spiders live everywhere! We even find them inside our homes. But how do they get way up on the ceiling? You have questions, and this book has the answers. Find out about spiders, including their body parts and behavior.

A vital resource for pilots, instructors, and students, from the most trusted source of aeronautic information.
