It is suggested that this shift is most appropriate for patients with long-term conditions and is generally shown to be cost-effective and acceptable amongst patients (Newbold, 2013). However, a King's Fund report (Ball et al., 2013) showed that in the last 15 years, the proportion of district nurses have not increased significantly.

Critically analyse the nurses' roles and responsibilities ...

Five months after the elimination of Abdel Malek Droukdel, aka Abu Musab Abdel Wadud, the leader of al-Qaeda in the Islamic Maghreb (AQIM), by the French army in the Malian city of Talhandak, AQIM appointed a new emir on Nov. 21. His name is Yazid Mebarek, aka Abu Ubayda Yusef al-Annabi, a 51-year-old Algerian and a jihad veteran.

DIVThis remarkable book looks at hundreds of autobiographies penned between 1760 and 1900 to offer an intimate firsthand account of how the Industrial Revolution was experienced by the working class. The Industrial Revolution brought not simply misery and poverty. On the contrary, Griffin shows how it raised incomes, improved literacy, and offered exciting opportunities for political action. For many, this was a period of new, and much valued, sexual and cultural freedom./divDIV /divDIVThis rich personal account focuses on the social impact of the Industrial Revolution, rather than its economic and political histories. In the tradition of best-selling books by Liza Picard, Judith Flanders, and Jerry White, Griffin gets under the skin of the period and creates a cast of colorful characters, including factory workers, miners, shoemakers, carpenters, servants, and farm laborers./div

The field of business history has changed and grown dramatically over the last few years. There is less interest in the traditional ‘company-centred’ approach and more concern about the wider business context. With the growth of multi-national corporations in the 1980s, international and inter-firm comparisons have gained in importance. In addition, there has been a move towards improving links with mainstream economic, financial and social history through techniques and outlook. The International Bibliography of Business History brings all of the strands together and provides the user with a comprehensive guide to the literature in the field. The Bibliography is a unique volume which covers the depth and breadth of research in business history. This exhaustive volume has been compiled by a team of subject specialists from around the world under the editorship of three prestigious business historians.

How capitalism first promoted fossil fuels with the rise of steam power The more we know about the catastrophic implications of climate change, the more fossil fuels we burn. How did we end up in this mess? In this masterful new history, Andreas Malm claims it all began in Britain with the rise of steam power. But why did manufacturers turn from traditional sources of power, notably water mills, to an engine fired by coal? Contrary to established views, steam offered neither cheaper nor more abundant energy—but rather superior control of subordinate labour. Animated by fossil fuels, capital could concentrate production at the most profitable sites and during the most convenient hours, as it continues to do today. Sweeping from nineteenth-century Manchester to the emissions explosion in China, from the original triumph of coal to the stalled shift to renewables, this study hones in on the burning heart of capital and demonstrates, in unprecedented depth, that turning down the heat will mean a radical overthrow of the current economic order.

On 16 August, 1819, at St Peter's Field, Manchester, armed cavalry attacked a peaceful rally of some 50,000 pro-democracy reformers. Under the eyes of the national press, 18 people were killed and some 700 injured, many of them by sabres, many of them women, some of them children. The 'Peterloo massacre', the subject of a recent feature film and a major commemoration in 2019, is famous as the central episode in Edward Thompsons Making of the English Working Class. It also marked the rise of a new English radical populism as the British state, recently victorious at Waterloo, was challenged by a pro-democracy movement centred on the industrial north. Why did the cavalry attack? Who ordered them in? What was the radical strategy? Why were there women on the platform, and why were they so ferociously attacked? Using an immense range of sources, and many new maps and illustrations, Robert Poole tells for the first time the full extraordinary story of Peterloo: the English Uprising.

From the mid-eighteenth century to the early nineteenth century, the English Old Poor Law was waning, soon to be replaced by the New Poor Law and its dreaded workhouses. In Writing the Lives of the English Poor, 1750s-1830s Steven King reveals colourful stories of poor people, their advocates, and the officials with whom they engaged during this period in British history, distilled from the largest collection of parochial correspondence ever assembled. Investigating the way that people experienced and shaped the English and Welsh welfare system through the use of almost 26,000 pauper letters and the correspondence of overseers in forty-eight counties, Writing the Lives of the English Poor, 1750s-1830s reconstructs the process by which the poor claimed, extended, or defended their parochial allowances. Challenging preconceptions about literacy, power, social structure, and the agency of ordinary people, these stories suggest that advocates, officials, and the poor shared a common linguistic register and an understanding of how far welfare decisions could be contested and negotiated. King shifts attention away from traditional approaches to construct an unprecedented, comprehensive portrait of poor law administration and popular writing at the turn of the nineteenth century. At a time when the western European welfare model is under sustained threat, Writing the Lives of the English Poor, 1750s-1830s takes us back to its deepest roots to demonstrate that the signature of a strong welfare system is malleability.

As editor Kenneth E. Hendrickson, III, notes in his introduction: “Since the end of the nineteenth-century, industrialization has become a global phenomenon. After the relative completion of the advanced industrial economies of the West after 1945, patterns of rapid economic change invaded societies beyond western Europe, North America, the Commonwealth, and Japan.” In The Encyclopedia of the Industrial Revolution in World History contributors survey the Industrial Revolution as a world historical phenomenon rather than through the traditional lens of a development largely restricted to Western society. The Encyclopedia of the Industrial Revolution in World History is a three-volume work of over 1,000 entries on the rise and spread of the Industrial Revolution across the world. Entries comprise accessible but scholarly explorations of topics from the “aerospace industry” to “zaibatsu.” Contributor articles not only address topics of technology and technical innovation but emphasize the individual human and social experience of industrialization. Entries include generous selections of biographical figures and human communities, with articles on entrepreneurs, working men and women, families, and organizations. They also cover legal developments, disasters, and the environmental impact of the Industrial Revolution. Each entry also includes cross-references and a brief list of suggested readings to alert readers to more detailed information. The Encyclopedia of the Industrial Revolution in World History includes over 300 illustrations, as well as artfully selected, extended quotations from key primary sources, from Thomas Malthus’ “Essay on the Principal of Population” to Arthur Young’s look at Birmingham, England in 1791. This work is the perfect reference work for anyone conducting research in the areas of technology, business, economics, and history on a world historical scale.

Once considered of little import, the social history of labor in the Middle East emerged in the 1980s as a major area of research, as historians sought to uncover the roots of working-class organizing. This volume, the first in an important new series, presents a broad overview of recent literature on the history of workers in the Middle East since 1800 in a bold effort to bring together new directions in research and to reexamine the relevance of established ones. Contributors explore the history of labor by situating state-led industrialization within the context of older artisanal social communities. They examine how industrialization enhanced government control over the economy as a whole and analyze the public’s reaction to centralized economic authority. They also explain the longevity of social coalitions supporting state industrial monopolies and examine their breakdown, along with the emergence of Islamist and other oppositional movements. Taken together the essays provide a historically grounded context for viewing the shifting relationship between states and the world economy as well as between particular states and classes and form a rich synthesis of current interdisciplinary literature on work and workers in the region.

This book links the world of finance directly to the fate of the cotton and textile industry, long a metaphor for the rise and fall of Britain as a manufacturing economy, for the first time.
