By late 1936, the worst years of the Great Depression are over. Wealth has created new opportunities for Minnie: a beautiful home in California, a luxury car, the yearning desire by a handsome lieutenant, and the family's summer retreat, which draws her like a magnet. Secrets abound. A hidden bohemian community of writers, poets, artists, and escapists is scattered across the shifting, coastal dunes near the cottage.In contrast to the seclusion of the cottage, Minnie's screenwriter cousin introduces her to the intrigue and excitement of Hollywood. Dwayne warns her about the "ruthless" characters willing to do anything to satisfy their lust for fame, fortune, and forbidden pleasures.A crisis forces Minnie to return temporarily to the South and the plantation. Hospitality greets her, but her guard remains razor sharp. Some past grudges will only be settled by the gun. Only Minnie's character will determine her future.

The search for housing that is healthy, affordable, and environmentally responsible is leading a growing number of people to take a fresh look at building techniques long shunned by the modern construction industry. Recently, books on specific techniques such as straw-bale construction, cob or rammed earth have become available, but there has been little to introduce the reader to the entire field. The Art of Natural Building fills that void wholly by being a complete and user-friendly introduction to natural building for non-professionals as well as architects and designers. From straw bale and cob to recycled concrete and salvaged materials, this anthology of articles from leaders in the field focuses on both the practical and the esthetic concerns of ecological building designs and techniques. Above all, this empowering guide demonstrates that anyone can design and build a home from natural materials that is beautiful, low-cost, and environmentally-sensible. Profusely illustrated, The Art of Natural Building is divided into five sections. The first provides an overview of the natural building movement from the various perspectives of sustainability, lifestyle, and health. The second section looks at planning and design, followed by a section that focuses on specific techniques and the vast variety of materials used in natural building. Next, examples of diverse natural dwellings are shared-from a Hybrid Hobbit House to a thatched studio and a cob office. Finally, complementary systems, such as solar appliances, composting toilets, and alternative power systems are covered. Packed with additional resources and a bibliography, this is the encyclopedia of natural building!

Humanity is a part of Nature, yet every thinking person at one time or another asks herself or himself, "How did we get here? What makes me different from the rest of Nature?" In The Course of Nature an artist and a scientist ask those questions with full respect for all contexts, both scientific and not. Amy Pollack's figures stand on their own as elegant summaries of one or another aspect of Nature and our place in it. Robert Pollack's one-page essays
