Meticulously research, *The Scramble for China* should be hugely informative in explaining to westerners the treatment meted out to China in the nineteenth century. Certainly, it does paint a vivid picture of the buccaneering activities of the foreigners as they forced China to trade on terms that they set unilaterally in the infamous "unequal treaties" so

*The Scramble for China* also deserves attention for its cool, incisive treatment of some enduring issues. For example, Bickers' treatment of the Qing court does not attempt to conceal, indeed brings out the subtlety of its position as both Manchu in its internal identity and Chinese on an international level.

China in 1910 Concessions in China were a group of concessions that existed during the late Imperial China and the Republic of China, which were governed and occupied by foreign powers, and are frequently associated with colonialism. Most had extraterritoriality and were enclaves inside key cities that became treaty ports.

The Scramble for China by Robert Bickers - review ... That changed after 1842 as foreign nations, particularly Britain, used gunboat diplomacy to steadily increase their influence until the ...

In the early nineteenth century China remained almost untouched by British and European powers - but as new technology started to change this balance, foreigners gathered like wolves around the weakening Qing Empire. Would the Chinese suffer the fate of much of the rest of the world, carved into pieces by Europeans? Or could they adapt rapidly enough to maintain their independence? This important and compelling book explains the roots of China's complex relationship with the West by illuminating a dramatic, colourful and sometimes shocking period of the country's history.

'Powerful, astute and readable . . . meticulously researched, and written with flair and feeling' John Keay, Literary Review From opium wars, conquest and rebellion to the end of the Qing imperial dynasty, the history of the European colonial 'scramble' for China is one of brutality and idealism, oppression and adventure - a story that is still central to the country's image of itself today. Robert Bickers' extraordinary book tells this epic story from both European and Chinese viewpoints, as 'foreign devils' gathered around China's weakened empire and tried to build a new world. 'At every airport bookshop, the traveller is offered shelves of volumes that purport to tell us how an emerging, powerful China will deal with the world. Those who wish to understand these issues more closely might be better advised to read this fair and fascinating account' Chris Patten, Financial Times 'Packed with interesting stories from a range of official and unofficial sources, The Scramble For China at times reads like historical fiction, veering at times into action-packed tales of intrigue. Throughout it maintains a humanity and sympathy for many of the individuals depicted in its pages' Beijing Today

China's new nationalism is rooted not in its present power but in shameful memories of its former weaknesses. Invaded, humiliated, and looted by foreign powers in the past, China looks out at the twenty-first century through the lens of the past two centuries. History matters deeply to Beijing's current rulers, and Robert Bickers explains why.

This riveting "biography of a nobody" offers a rare view of empire from the bottom up and a glimpse of the making of modern China. Robert Bickers mines the letters of Richard Tinkler along with archival files to create a fascinating and much-needed narrative of everyday life in the colonial world and an unvarnished portrait of the colonial experience that will permanently affect our view of it.

In African Countries and the Global Scramble for China, Mbaidjol engages the reader, from African perspectives and African People's interests, in a theme that is currently fuelling international relations debates.

From its origins in Liverpool in 1816, one unusual British firm has threaded a way through two centuries that have seen tumultuous events and epochal transformations in technologies and societies. John Swire & Sons, a small trading company that began by importing dyes, cotton and apples from the Americas, now directs a highly diversified group of interests operating across the globe but with a core focus on Asia. From 1866 its fate was intertwined with developments in China, with the story of steam, and later of flight, and with the movements of people and of goods that made the modern world. China Bound charts the story of the firm, its family owners and staff, its operations, its successes and its disasters, as it endured wars, uprisings and revolutions, the rise and fall of empires - China's, Britain's, Japan's - and the twists and turns of the global economy. This is the story of a business that reshaped Hong Kong, developed Cathay Pacific Airways, dominated China's pre-Second World War shipping industry, and helped pioneer containerization. Robert Bickers' remarkable new book is the history of a business, and of its worlds, of modern China, Britain, and of the globalization that entangled them, of compradors, ship-owners, and seamen, sugar travellers, tea-tasters, and stuff merchants, revolutionaries, pirates and Taipans. Essential reading for anyone with an interest in global commerce, China Bound provides an intimate history that helps explain the shape of Asia today.

With a focus on China, the United States, and India, this book examines the economic ambitions of the second space race. The authors argue that space ambitions are informed by a combination of factors, including available resources, capability, elite preferences, and talent pool. The authors demonstrate how these influences affect the development of national space programs as well as policy and law.

Once marginalized in the world economy, the past decade has seen Africa emerge as a major global supplier of crucial raw materials like oil, uranium and coltan. With its share of world trade and investment now rising and the availability of natural resources falling, the continent finds itself at the centre of a

battle to gain access to and control of its valuable natural assets. China's role in Africa has loomed particularly large in recent years, but there is now a new scramble taking place involving a wider range of established and emerging economic powers from the EU and US to Japan, Brazil and Russia. This book explores the nature of resource and market competition in Africa and the strategies adopted by the different actors involved - be they world powers or small companies. Focusing on key commodities, the book examines the dynamics of the new scramble and the impact of current investment and competition on people, the environment, and political and economic development on the continent. New theories, particularly the idea of Chinese "flexigemony" are developed to explain how resources and markets are accessed. While resource access is often the primary motive for increased engagement, the continent also offers a growing market for low-priced goods from Asia and Asian-owned companies. Individual chapters explore old and new economic power interests in Africa; oil, minerals, timber, biofuels, food and fisheries; and the nature and impacts of Asian investment in manufacturing and other sectors. The New Scramble for Africa will be essential reading for students of African studies, international relations, and resource politics as well as anyone interested in current affairs.

Two leading experts on China evaluate its rise throughout the past one hundred fifty years, sharing portraits of key intellectual and political leaders to explain how China transformed from a country under foreign assault to a world giant.

Africa is playing a more important role in world affairs than ever before. Yet the most common images of Africa in the American mind are ones of poverty, starvation, and violent conflict. But while these problems are real, that does not mean that Africa is a lost cause. Instead, as Stephen Ellis explains in *Season of Rains*, we need to rethink Africa's place in time if we are to understand it in all its complexity—it is a region where growth and prosperity coexist with failed states. This engaging, accessible book by one of the world's foremost researchers on Africa captures the broad spectrum of political, economic, and social foundations that make Africa what it is today. Ellis is careful not to position himself in the futile debate between Afro-optimists and Afro-pessimists. The forty-nine diverse nations that make up sub-Saharan Africa are neither doomed to fail nor destined to succeed. As he assesses the challenges of African sovereignties, Ellis is not under the illusion that governments will suddenly become more benevolent and less corrupt. Yet, he sees great dynamism in recent technological and economic developments. The proliferation of mobile phones alone has helped to overcome previous gaps in infrastructure, African retail markets are becoming integrated, and banking is expanding. Businesses from China and emerging powers from the West are investing more than ever before in the still land-rich region, and globalization is offering possibilities of enormous economic change for the growing population of one billion Africans, actively engaged in charting the future of their continent. This highly readable survey of the continent today offers an indispensable guide to how money, power, and development are shaping Africa's future.
