their implication on education. It also introduces readers to the theorists behind the theories in a lively and easily accessible manner. Comparing and contrasting the theories covered, the book focuses on theorists who follow the developmental tradition of Rousseau - such as Gesell, Piaget, and Montessori - and their belief that we grow largely from our inner promptings and spontaneous discoveries at different times throughout our lifetimes. In addition, the author looks at theorists in the environmental/learning tradition. For anyone interested in the philosophy of child rearing and education, relative to a child's growth and the growth of our society as a

Understanding child development is essential to ensuring a full and rounded psychological grounding, but given the

complex nature of the topic it can be a real challenge. Child Development: Concepts and Theories takes a step back to focus just on the key concepts of child development that all students must learn. With this book, their first encounters with theories and their applications will mean that they can move on with a firm foundation in child development. Central to this, is understanding how these theories or concepts are applied in the real world and how psychologists engage with them in research. This book gives clear and detailed examples to bring the subject to life. Each chapter features case studies that run throughout the chapter and develop as the students' own understanding does. Written for undergraduates, the book will become essential to any student wanting a key to unlock the world of child development. Jean Mercer is

volume has been substantially revised with an eye toward supporting applied developmental science and the developmental systems perspectives. Since the publication of the second edition, developmental systems theories have taken center stage in contemporary developmental science and have provided compelling alternatives to reductionist theoretical accounts having either a nature or nurture emphasis. As a consequence, a developmental systems orientation frames the presentation in this edition. This new edition has been expanded substantially in comparison to the second edition. Special features include: * A separate chapter focuses on the historical roots of concepts and theories of human development, on philosophical models of development, and on developmental contextualism. * Two

new chapters surrounding the discussion of developmental contextualism--one on developmental systems theories wherein several exemplars of such models are discussed and a corresponding chapter wherein key instances of such theories--life span, life course, bioecological, and action theoretical ones--are presented. * A new chapter on cognition and development is included, contrasting systems' approaches to cognitive development with neo-nativist perspectives. * A more differentiated treatment of nature-oriented theories of development is provided. There are separate chapters on behavior genetics, the controversy surrounding the study of the heritability of intelligence, work on the instinctual theory of Konrad Lorenz, and a new chapter on sociobiology. * A new chapter concentrates on applied

new text presents nine theories grouped into three major families - those that emphasize biological systems; those that emphasize environmental factors; and those that emphasize a dynamic interaction between biological and environmental forces. The nine theories selected have a long and productive history in human development and continue to evolve as a result of new insights. The inclusion of social role theory and life course theory expand the book's relevance to the study of adulthood and aging. Grouping the theories by families enhances students' ability to think critically about theoretical ideas, assess the strengths and weaknesses of each theory, and gain a deeper understanding of how each theory guides research and application. The three families are introduced with a brief overview of the unique perspectives of each

theory and the rationale for grouping these theories together. Discussion of each theory includes: the historical and cultural context in which the theory was developed; an overview of key concepts and important ideas; new directions in contemporary scientific work; a research example illustrating how the theory has been tested and modified; an application showing how the theory has guided the design of an intervention or program; an analysis of how the theory answers basic questions about human development; and a critique highlighting the theories' strengths and weaknesses. Theories of Human Development serves as a text in advanced undergraduate and/or beginning graduate courses in theories of human development. Its clear organization and engaging writing style make it accessible to students with a

Widely adopted, this text critically evaluates the leading theories of international economic development, from classical economic and sociological models to Marxist, poststructuralist, and feminist perspectives. No other book provides such comprehensive coverage or links the theories as incisively to contemporary world events and policy debates. Reexamining neoliberal conceptions of economic growth, the authors show what a more just and democratic form of development might look like today.
