Usami Nagisa is a yankee who suffers from a supposed "rare disease" which causes her health to decline if she feels lonely. Sewa Natsuhito, the boy who sits next to her in class realizes this and keeps her company, but the only way Usami believes she can cure her "illness" is to make lots of friends, a process she might find quite difficult due to her aggressive looks and personality.

The selected contributions of this volume focuses on various issues related to second language pedagogy and second language acquisition in the Japanese context. Part I covers such topics as discourse pragmatics and cross-cultural pragmatics in language teaching; the instruction of conversation through training in story telling skills; task activities as a means for grammarization in grammar teaching; the development of a computerized speaking test and a proficiency scale for EFL learners; and the social aspects of the language teacher expertise. Part II deals with the cognitive transformation involved in the acquisition of syntactic structures; the application of ZPD to adult learners not only in terms of interpersonal interaction but also through interfacing with other media; examination of learners' narrative data to analyze linguistic and gestural reference and to investigate learners' use of phrasal verbs; learner's strategy use in self-instruction that utilizes audiovisual materials; and network computer technology in computer-assisted language learning.

This book, comprising two parts, is concerned with both the science and the art of foreign language teaching, with a particular, but not exclusive, focus on Asia. Under the theme of "Theoretical foundation and research", Part 1 of this book informs the readers about recent efforts in theoretical and empirical research which have had an impact on foreign language teaching or promise to yield results that will shape its future. These studies, not just from the domain of foreign language teaching but also its primary feeder disciplines of linguistics and second language acquisition, offer the necessary theoretical and conceptual foundation for both current and future research and practice. As its theme "Classroom practice and evaluation studies" suggests, Part 2 focuses on new and innovative developments in curricular and classroom practice, all built upon insights from research in the above-mentioned

disciplines and poised to become standard practices. These projects include qualitative and quantitative evaluation studies which have yielded insightful data for the refinement and continued development of the projects and their underlying theoretical concepts.

Analysis and Design of Plated Structures: Stability, Second Edition covers the latest developments in new plate solutions and structural models for plate analysis. Completely revised and updated by its distinguished editors and international team of contributors, this edition also contains new chapters on GBT-based stability analysis and the finite strip and direct strength method (DSM). Other sections comprehensively cover bracing systems, storage tanks under wind loading, the analysis and design of light gauge steel members, applications of high strength steel members, cold-formed steel pallet racks, and the design of curved steel bridges. This is a comprehensive reference for graduate students, researchers and practicing engineers in the fields of civil, structural, aerospace, mechanical, automotive and marine engineering. Features new chapters on the stability behavior of composite plates such as laminated composite, functionally graded, and steel concrete composite plate structures Includes newly developed numerical simulation methods and new plate models Provides generalized beam theory for analyzing thin-walled structures

"As an anthologist, Ellery Queen is without peer, his taste unequalled. As a bibliographer and a collector of the detective short story, Queen is, again, a historical personage. Indeed, Ellery Queen clearly is, after Poe, the most important American in mystery fiction." — Otto Penzler, from *Detectionary: A Biographical Dictionary of Leading Characters in Mystery Fiction*

A newspaper receives a letter from a man claiming to have been murdered—it's impossible but the truth is not so simple; five strangers who share the same initials are invited to spend the night in a luxury hotel but one of them is a murderer. The 12 stories in this book will lead you through dramatic twists and unexpected turns. The legendary Ellery Queen selected these stories by award-winning Japanese authors from among many thousands published in postwar Japan. Each story features an unusual crime and a complex set of clues investigated by a diverse and colorful cast of characters that includes a calculating inspector, a tenacious journalist, and a determined scientist. The thrilling stories in this volume include: "Perfectly Lovely Ladies" by Kawabata Award winner Yasutaka Tsutsui: Eight women fight the high cost of living using violent means but will they get away with murder? "The Cooperative Defendant" by Akutagawa Prize winner Seicho Matsumoto: After a man confesses to a killing, he retracts his confession and accuses the detectives of coercion. But who is right? "Devil of a Boy" by Edogawa Rampo Prize winner Seiichi Morimura: A schoolboy may still be very young but he is as sinister as the most hardened of criminals—or is someone else involved? "The Kindly Blackmailer" by Mystery Writers of Japan Award winner Kyotaro Nishimura: A man involved in a fatal hit-and-run is blackmailed by a mysterious witness. Who is this enigmatic stranger? Ellery Queen's *Japanese Mystery Stories* is a collection that is sure to delight lovers of great detective and crime fiction. The book features a new foreword by Japanese detective fiction expert Satoru Saito which places the stories within the context of Japanese society and modern Japanese literature.

This book surveys recent theoretical and experimental studies of optical properties of low-dimensional materials. As an extended version of *Optical Properties of Low-Dimensional Materials* (Volume 1, published in 1995 by World Scientific), Volume 2 covers a wide range of interesting low-dimensional materials including both inorganic and organic systems, such as disordered polymers, deformable molecular crystals, dilute magnetic semiconductors, SiGe/Si short-period superlattices, GaAs quantum wires, semiconductor microcavities, and photonic crystals. There are excellent review articles by promising researchers in each field. All the materials introduced in this book yield new optical phenomena originating from their mesoscopic and low-dimensional electronic characters and electron-lattice couplings, which offer a new research field of materials science as well as condensed-matter and optical physics. Volumes 1 and 2 are interrelated but can be read independently. They are pitched at the level of graduate students and are useful to both students and scientists. Contents: Excitons and Nonlinear Excitations in Organic Conjugated Systems (K Harigaya) Lattice Dynamics of Disordered Materials (Y Kanematsu) Photoinduced Phase Transitions and Cooperative Phenomena (S Koshihara) Spin-Induced Optical Phenomena in Diluted Magnetic Semiconductors (S Takeyama) Radiative Recombination in Strained SiGe-Based Microstructures (S Fukatsu) GaAs Quantum Wires (T Sogawa) Microcavity Effects in Semiconductor Quantum Wells (Y Kadoya) Photonic Crystals (K Sakoda) Readership: Researchers and students in condensed matter/solid state physics, semiconductors, applied physics and materials science. keywords: Low Dimension; Optical Property; Materials Science; Nanoscience; Quantum Confinement; Exciton; Phonon; Photon; Electronic Structure; Lattice Structure
