This report deals with the problem of determining the trajectory of a spacecraft from on-board optical measurements without a priori information. Only sufficient information to determine the trajectory is used, and it is assumed that this preliminary estimate will be improved later by the use of differential corrections and redundant data. Five basic types of measurements, representing instruments considered feasible or within the state of the art, are considered. The effects of random and bias type measurement errors and interpolation errors arising from nonsimultaneous measurements are analyzed. Only observations of the central body and two stars are considered. Within certain limitations all five types of measurements will give satisfactory results. Two important factors discussed in the report are the proper choice of stars and the calibration for eliminating bias errors.

A Board Game Education is an entertaining and valuable resource for parents, teachers, educators, and anyone who appreciates the fun and entertainment provided by classic, traditional board games. The book provides an informative analysis of how classic board games that everyone has played and probably owns are not only great family entertainment but also develop core educational skills that have been proven to lead to academic achievement. Through A Board Game Education readers learn a bit of the fascinating history trivia and little-known facts regarding the most loved board games of all time (i.e., how Monopoly was used by WWII POWs to escape). At the same time, Hinebaugh identifies the distinct educational skills developed by each of these games and explores in detail how the play of these games cultivates such skills. A Board Game Education also provides valuable suggestions about how to modify and vary these classic board games to specifically enhance additional core educational skills and concepts. Who would have thought that Candy Land could be modified into a strategy game and Chutes and Ladders could be used to teach algebraic equations and advanced math.

A much-talked-about topic gets thorough consideration from two educator-librarians, who explain exactly how designer board games which are worlds apart from games produced strictly for the educational market can become curricular staples for students young and old.
