According to Dun & Bradstreet, 90% of all business failures analyzed can be traced to poor management. This is backed up by my own experience. In my 31 years as a business coach and consultant to businesses, I've seen practically dozens of business owners fail and go under -- not because they weren't talented or smart enough -- but because they were trying to re-invent the wheel rather than rely on proven, tested methods that work. And that is where this book can help, it will teach you how to avoid the common traps and mistakes and do everything right the first time.

Nonverbal communication skills such as mirroring, listening, and small talk are just a few topics we will cover in this elaborate guide. How do you get people to like you better? What should we say? How can we basically read what another person is thinking? These are questions everyone has asked him- or herself every so often. And the answers are right here, in this book. I encourage you to not hold yourself back any longer and make that knowledge fly off the pages into your ever-learning, intelligent brain.

impressions. It is the sum total of ones' vocal inflections, facial expressions, gestures, posture and physical demeanor when communicating with others.

The way we say the words we say helps us convey our intended meanings. Indeed, the tone of voice we use, the facial expressions and bodily gestures we adopt while we are talking, often add entirely new layers of meaning to those words. How the natural non-verbal properties of utterances interact with linguistic ones is a question that is often largely ignored. This book redresses the balance, providing a unique examination of non-verbal behaviours from a pragmatic perspective. It charts a point of contact between pragmatics, linguistics, philosophy, cognitive science, ethology and psychology, and provides the analytical basis to answer some important questions: How are non-verbal behaviours interpreted? What do they convey? How can they be best accommodated within a theory of utterance interpretation?

Human behavior forms the nucleus of military effectiveness. Humans operating in the complex military system must possess the knowledge, skills, abilities, aptitudes, and temperament to perform their roles effectively in a reliable and predictable manner, and effective military management requires understanding of how these qualities can be best provided and assessed. Scientific research in this area is critical to understanding leadership, training and other personnel issues, social interactions and organizational structures within the military. The U.S. Army Research Institute for the Behavioral and Social Sciences (ARI) asked the National Research Council to provide an agenda for basic behavioral and social research focused on applications in both the short and long-term. The committee responded by recommending six areas of research on the basis of their relevance, potential impact, and timeliness for military needs: intercultural competence; teams in complex environments; technology-based training; nonverbal behavior; emotion; and behavioral neurophysiology. The committee suggests doubling the current budget for basic research for the behavioral and social sciences across U.S. military research agencies. The additional funds can support approximately 40 new projects per year across the committee's recommended research areas. Human Behavior in Military Contexts includes committee reports and papers that demonstrate areas of stimulating, ongoing research in the behavioral and social sciences that can enrich the military's ability to recruit, train, and enhance the performance of its personnel, both organizationally and in its many roles in other cultures.
