Describes Easter Island and tell how people first came to live there and discusses how they built the enormous statues and why.

The centuries-old mysteries and haunting past of Easter Island become catalysts for the parallel quests of two young women, separated by sixty years of history--Elsa Pendleton, who travels to Easter Island with her anthropologist husband in 1913, and widowed American botanist Dr. Greer Faraday--as they confront discoveries about themselves and the people they love. A first novel. Reprint.

From the author of Guns, Germs and Steel, Jared Diamond's Collapse: How Societies Choose to Fail or Survive is a visionary study of the mysterious downfall of past civilizations. Now in a revised edition with a new afterword, Jared Diamond's Collapse uncovers the secret behind why some societies flourish, while others founder - and what this means for our future. What happened to the people who made the forlorn long-abandoned statues of Easter Island? What happened to the architects of the crumbling Maya pyramids? Will we go the same way, our skyscrapers one day standing derelict and overgrown like the temples at Angkor Wat? Bringing together new evidence from a startling range of sources and piecing together the myriad influences, from climate to culture, that make societies self-destruct, Jared Diamond's Collapse also shows how - unlike our ancestors - we can benefit from our knowledge of the past and learn to be survivors. 'A grand sweep from a master storyteller of the human race' - Daily Mail 'Riveting, superb, terrifying' - Observer 'Gripping ... the book fulfils its huge ambition, and Diamond is the only man who could have written it' - Economist 'This book shines like all Diamond's work' - Sunday Times

The monumental statues of Easter Island, both so magisterial and so forlorn, gazing out in their imposing rows over the island’s barren landscape, have been the source of great mystery ever since the island was first discovered by Europeans on Easter Sunday 1722. How could the ancient people who inhabited this tiny speck of land, the most remote in the vast expanse of the Pacific islands, have built such monumental works? No such astonishing numbers of massive statues are found anywhere else in the Pacific. How could the islanders possibly have moved so many multi-ton monoliths from the quarry inland, where they were carved, to their posts along the coastline? And most intriguing and vexing of all, if the island once boasted a culture developed and sophisticated enough to have produced such marvelous edifices, what happened to that culture? Why was the island the Europeans encountered a sparsely populated wasteland? The prevailing accounts of the island’s history tell a story of self-inflicted devastation: a glaring case of eco-suicide. The island was dominated by a powerful chiefdom that promulgated a cult of statue making, exercising a ruthless hold on the island’s people and rapaciously destroying the environment, cutting down a lush palm forest that once blanketed the island in order to construct contraptions for moving more and more statues, which grew larger and larger. As the population swelled in order to sustain the statue cult, growing well beyond the island’s agricultural capacity, a vicious cycle of warfare broke out between opposing groups, and the culture ultimately suffered a dramatic collapse. When Terry Hunt and Carl Lipo began carrying out archaeological studies on the island in 2001, they fully expected to find evidence supporting these accounts. Instead, revelation after revelation uncovered a very different truth. In this lively and fascinating account of Hunt and Lipo’s definitive solution to the mystery of what really happened on the island, they introduce the striking series of archaeological discoveries they made, and the path-breaking findings of others, which led them to compelling new answers to the most perplexing questions about the history of the island. Far from irresponsible environmental destroyers, they show, the Easter Islanders were remarkably inventive environmental stewards, devising ingenious methods to enhance the island’s agricultural capacity. They did not devastate the palm forest, and the culture did not descend into brutal violence. Perhaps most surprising of all, the making and moving of their enormous statues did not require a bloated population or tax their precious resources; their statue building was actually integral to their ability to achieve a delicate balance of sustainability. The Easter Islanders, it turns out, offer us an impressive record of masterful environmental management rich with lessons for confronting the daunting environmental challenges of our own time. Shattering the conventional wisdom, Hunt and Lipo’s ironclad case for a radically different understanding of the story of this most mysterious place is scientific discovery at its very best.

"An exploration of the questions and mysteries that have puzzled scholars and experts about the remote location of Easter Island, including its culture, giant statues, and writing. Features include a map, fact boxes, biographies of famous experts on Easter Island, places to see and visit, a glossary, further readings, and index"--

"All the seashore is lined with numbers of stone idols, with their backs turned towards the sea, which caused us no little wonder, because we saw no tool of any kind for working these figures." So wrote, a century and a half ago, one of the earliest navigators to visit the Island of Easter in the South-east Pacific. Ever since that day passing ships have found it incomprehensible that a few hundred natives should have been able to make, move, and erect numbers of great stone monuments, some of which are over thirty feet in height; they have marvelled and passed on. As the world's traffic has increased Easter Island has still stood outside its routes, quiet and remote, with its story undeciphered. What were these statues of which the present inhabitants know nothing?... Whence came the people who reached this remote spot? Did they arrive from South America, 2,000 miles to the eastward? Or did they sail against the prevailing wind from the distant islands to the west?...

"Easter Island ia a book in which S&E editors, through its brand NicEye, documents one of Chile’s most famous World Heritage sites declared by UNESCO. In this book, we review the history of an island located in the middle of the South Pacific, halfway between Continental Chile and Tahiti: Rapa Nui. Named as such by its natives, it has become famous all over the world not only for its unique location and geography, but also for the existence of almost one thousand gigantic sculptures that can be found all over the island; carved out of rock and spanning centuries, they are called Moais."

Since Easter Island (Rapa Nui) was first discovered nearly 300 years ago, its people, culture and monolithic statues have been seen as an unsolvable riddle. At the heart of the so-called mystery stand the gigantic moai. How were they moved? What do they mean? Over more than 12 years, nearly 1000 statues have been measured, drawn, and photographed by Jo Anne Van Tilburg and a team of colleagues. In this book the author draws on the insights that have been gained, to examine Rapa Nui prehistory in the context of new understandings of ecology and culture.

Discusses the many visits made by explorers, missionaries, businessmen, scientists, and others to Easter Island since the late 1600s and what they revealed about life on this remote Pacific island.
